Total Out of Class Hours: 52.50 Total Student Learning Hours: 105.00

Title 5 Category: AA Degree Applicable

Grading: Grade Only

Repeatability: 33 - 3 Enrollments Total

Also Listed As:

Formerly: APTECH 54

Catalog Description:

An introduction to geographical information systems (GIS), including their use, input, analysis and output of spatial data. Topics include elements of a GIS, data structures and their management, and basic input and output functions and mapping possibilities. Hands-on exposure to computers and the current Arc-View, GIS software package is provided during laboratory.

Prerequisites/Corequisites:

Recommended Preparation:

A working knowledge of the IBM compatible computer system is advised.

Limits on Enrollment:

COURSE CONTENT

Outcomes and Objectives:

The student will:

- 1. Demonstrate an understanding of how a GIS project is created.
- 2. Identify the principals and applications of geographical data.
- 3. Identify the functions and operations of a GIS.
- 4. Determine the best GIS for specific applications and budget.
- 5. Plan and design a GIS database.
- 6. Perform query and analysis functions with a GIS.
- 7. Integrate GIS with other technologies.
- 8. Produce a graphical representation of a GIS.
- 9. Become familiar with the Arc-View GIS Software package and how it creates a GIS.

Topics and Scope:

- 1. Introduction to a GIS and the Arc-View software.
- 2. Properties of geographical data and data sources.
- 3. GIS functions and operations. Developing a model.
- 4. GIS applications, determination of different types of GIS.
- 5. Planning and designing a GIS.
- 6. Working with a GIS database: design retrieval, updates. Building a database structure and assigning attributes to geographical data.
- 7. Overview of the query and analysis functions. Performing basic query and analysis functions.
- 8. Integrating GIS with other technologies.
- 9. Producing output data.

10. Future directions and applications with other disciplines, technologies, etc.

Assignment:

- 1. Identify the principals & applications in GIS and ArcView software.
- 2. Identify the properties of geographical data and data sources.
- 3. Developing a model with themes, overlays and buffers.
- 4. Determine the best type of GIS, application vs cost.
- 5. Planning and designing a GIS.
- 6. Building a database structure and assigning attributes to geographical data.
- 7. Performing basic query and analysis functions.
- 8. Overlay GIS data with other imagery.
- 9. Designing and producing maps.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments and skill demonstrations are more appropriate for this course.

Writing 0 - 0%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or noncomputational problem solving skills.

Homework problems, Quizzes, Exams

Problem solving 10 - 20%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Class performances, Performance exams

Skill Demonstrations 40 - 60%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion

Exams 20 - 30%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category 0 - 0%

Representative Textbooks and Materials:

1. Getting to Know ArcView GIS, ESRI Certified, 1999

2. ESRI, Inc., Reference Manuals for ArcView Software. Current available edition to be used.
