		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 105.00

Total Student Learning Hours: 210.00

Title 5 Category: AA Degree Applicable

Grading: Grade Only

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly: ANAT 70

Catalog Description:

This is an introductory course in human anatomy and physiology, and covers the structure and function of all organ systems of the human body. Basic terminology and concepts will be covered, with an emphasis on structure/ function relationships and homeostasis. (Intended for paramedic students)

Prerequisites/Corequisites:**Recommended Preparation:**

Completion of HLC 160 and CHEM 60, and eligibility for ENGL 100 or ESL 100.

Limits on Enrollment:**Schedule of Classes Information:**

Description: Introductory course in human anatomy and physiology. Covers the structure and function of all organ systems of the body. Meets general education requirement. (Intended for paramedic students) (Grade Only)

Prerequisites/Corequisites:

Recommended: Completion of HLC 160 and CHEM 60, and eligibility for ENGL 100 or ESL

100.

Limits on Enrollment:

Transfer Credit: CSU;UC.

Repeatability: Two Repeats if Grade was D, F, NC, or NP

Both Certificate and Major Applicable

COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

1. Describe the structure and function of the major tissues, organs, and systems of the human body.
2. Apply core concepts of anatomy and physiology to understanding the basis for some common medical conditions.

Objectives:

Upon completion of this course students will be able to:

1. Describe the scientific method and apply this knowledge to the course content; differentiate the scientific method from other modes of knowing.
2. Relate basic chemical concepts and cell structure to the function of organs.
3. Name the organ systems, identify the major organs, and describe their functions.
4. Summarize the structures and functions necessary to accomplish movement of the body.
5. Compare how body-wide communication is accomplished by the nervous and endocrine systems.
6. Name the factors essential for life, and describe how they are supplied, transported and regulated inside the body.
7. Compare the various structures and processes used for defense against injury and infection.

8. Describe human reproductive structures and mechanisms.
9. Apply core concepts of anatomy and physiology to understanding the basis for some common medical conditions.
10. Perform basic physiological measurements such as EKG and blood pressure.

Topics and Scope:

I. Introductory concepts

A. Scientific method

1. power and limits of scientific method
2. comparison of scientific method with other modes of learning
3. contributions of study of anatomy and physiology

B. levels of biologic organization

C. human body plan, planes, cavities

D. anatomical terminology

E. homeostasis

1. negative feedback
2. regulated parameters

II. Cells and tissues: structure and function

A. macromolecules

B. organelles

C. cell membranes and osmosis

D. metabolism: energy and enzymes

E. tissues

III. Support and Movement

A. Integument

B. Skeletal system

1. bones
2. joints

C. Muscular System

1. muscles
2. muscle contraction

IV. Control Systems

A. Nervous system

1. neurons and synapses
2. special senses

B. Endocrine system

1. endocrine glands
2. hormones

C. Receptors, drugs, poisons

V. Internal Environment

A. Cardiovascular system

1. heart and blood vessels
2. regulation of cardiac function, blood pressure
3. formation of cardiac action potential and conduction

B. Respiratory system

1. lungs, thoracic cavity
2. structure and function of conducting zone organs
3. respiratory gases
4. regulation of respiration and pH

C. Urinary System

1. kidneys and nephrons

2. osmoregulation
3. blood pressure and pH regulation
- D. Digestive system
 1. gastrointestinal tract and accessory organs
 2. digestion and glands
 3. regulation of metabolism
- VI. Defense
 - A. Blood
 - B. Immune system
 1. organs, tissue, and cells
 2. inflammation
 3. specific immune system
 4. allergy, anaphylaxis, immunization
- VII. Reproduction
 - A. Male reproductive structures and functions
 - B. Female reproductive structures and functions
 - C. Gestation, parturition, lactation
- VIII. Laboratory Exercises
 - A. All of the above mentioned structures will be studied by means of histological specimens, models, charts, and human cadavers or dissections in the anatomy section of course.
 - B. Physiological lab exercises will be performed on the following topics:
 1. homeostasis
 2. muscle contraction
 3. reflex action
 4. sensory receptor function
 5. cardiac function
 6. pulmonary function
 7. renal function
 8. acid base balance
 9. glucose tolerance test
 10. blood typing

Assignment:

1. Weekly reading in text, 40-80 pages per week
2. Study of histological slides, charts, models, and anatomical specimens during lab hours
3. Performance of physiological observations during lab hours
4. Written laboratory assignments including short essay, fill-in, and diagrams averaging one assignment every week
5. Homework consisting of brief written reports
6. Formal assessment: quizzes, 3 to 4 lab practical exams, 3 to 4 lecture exams, including objective and essay questions

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written homework

Writing
10 - 20%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Laboratory assignments, written homework

Problem solving
10 - 20%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations
0 - 0%

Exams: All forms of formal testing, other than skill performance exams.

Lecture exams, objective and essay questions

Exams
60 - 80%

Other: Includes any assessment tools that do not logically fit into the above categories.

Participation in lecture and lab

Other Category
0 - 5%

Representative Textbooks and Materials:

Essentials Of Human Anatomy & Physiology, 10th edition Elaine Marieb, Benjamin Cummings 2010

Essentials of Anatomy & Physiology, 5th Edition, F.H. Martini and E.F. Bartholomew, Benjamin Cummings, 2010

Anatomy and Physiology for Emergency Care, 2nd edition, FH Martini, E.F. Bartholomew, BE Bledsoe, Prentice Hall 2007 (current edition)
