COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

1. Demonstrate accurate analysis of epidemiological reports on chronic and infectious diseases worldwide.
2. Evaluate aspects of lifestyle changes that can prevent or reduce the prevalence of chronic and infectious diseases in individuals and in the community.

Objectives:

At the conclusion of this course, the student should be able to:

1. Define important foundational concepts in community and public health.
2. Identify different public health professions and organizations and explain how each contributes to the field of public health.
3. Describe the historical development of public health including the most important achievements of public health.
4. Distinguish the difference between personal and public health.
5. Distinguish how public health differs from the traditional Western medicine approach to treating disease and illness.
6. Demonstrate the use of basic epidemiological methods, such as the analysis of rates, and the definition of cases, population at risk, risk factors, incidence, prevalence, morbidity, and mortality.
7. Outline strategies for prevention, detection, and control of infectious and chronic diseases.
8. Outline the process of community organizing and health promotion programming.
9. Describe the interplay between health determinants, such as environmental conditions, social, behavioral and cultural factors, and biological considerations, and explain the role of each in determining local, national and global health organization and policy.
10. Analyze current public health issues and describe how they affect societal well-being among specific populations of age, sex, ethnicity, minority, education and socioeconomic status.
11. Describe the organization, financing, and delivery of various medical and population-based

services in the U.S. healthcare system.

12. Identify, assess, and utilize credible information resources on community health current issues, such as the internet, social media, media outlets, and libraries.

Topics and Scope:

I. Definition of Public Health

- A. Distinction between personal and public health
- B. History and accomplishments of public health officials and agencies
- C. Core functions of public health professions and institutions

II. Analytical Methods of Public Health

- A. Epidemiology
