Catalog Description:

Students learn to effectively use animation controls for three-dimensional (3D) models and characters: Use of set-driven keys, deformers, constraints, and kinematic controls, including the exporting of rigged characters and objects to a game/simulation platform.

This is a Regional Virtual Production Academy (RVPA) course that is not offered at SRJC but is available through one or more of the other five participating colleges of the RVPA collaborative program. Learn more about the RVPA at https://cs.santarosa.edu/vp

Prerequisites/Corequisites:

Recommended Preparation:

COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

- 1. Design a complete skeleton and create a control rig for a 3D model using forward and inverse kinematics.
- 2. Skin and paint weights on mesh for accurate deformation of all joints and control and limit movement of joints to behave correctly in accordance with the movement of the model.
- 3. Create a facial rig and use blend shapes for a character model.

Objectives:

At the conclusion of this course, the student should be able to:

- 1. Set up a complete skeleton for a 3D model.
- 2. Identify locations and place joints in appropriate locations for realistic movement.
- 3. Apply set-driven keys to control movement.
- 4. Rig a character using inverse kinematics and forward kinematics.
- 5. Set up groups and hierarchies to control inverse kinematics.
- 6. Rig a face using the blend shapes method and the skeleton method.
- 7. Bind a character's skeleton to its mesh with smooth binding and rigid binding.
- 8. Paint weights on vertices so the mesh will deform properly with all joint movements.
- 9. Limit the motion of joints by locking transforms and setting joint rotation restrictions.
- 10. Create natural character poses to test the motion of the skeleton and mesh.

Topics and Scope:

I. Overview of Rigging and Industry Roles II. Set-Driven Keys and Controllers III. Character Skeletons and Joints IV. Rigging a Character and Building Controllers V. Skinning and Painting Weights VI. Facial Blend Shapes VII. Rotations, Dynamics, and Kinematics VIII. Effective Critique Methods IX. Project Management X. Create and Apply Blend Shapes for Facial Rigging XI. Rigging Characters XII. Skinning and Weighting Characters XIII. Creation of Set Driven Key Projects-Building Controllers XIV. Presentations and Critiques of Projects **Assignment:** 1. Video viewing with written critiques 2. Hands-on projects 3. Final exam Methods of Evaluation/Basis of Grade: Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing. Writing Video viewing with written critiques 10 - 25% **Problem Solving:** Assessment tools, other than exams, that demonstrate competence in computational or noncomputational problem solving skills. Problem solving Hands-on projects 25 - 60% **Skill Demonstrations:** All skill-based and physical demonstrations used for assessment purposes including skill performance exams. Skill Demonstrations Hands-on projects 25 - 40%

Other: Includes any assessment tools that do not logically fit into the above categories.

Exams: All forms of formal testing, other than skill

performance exams.

Final exam

Participation

Other Category 0 - 5%

Exams

5 - 30%
