COURSE CONTENT

Outcomes and Objectives:

After successful completion of this course, a student will be able to:

1. Identify factors that affect the rate of a chemical reaction, and measure those rates experimentally in order to determine a rate law for that reaction.
2. Describe phenomena related to nuclear chemistry and radioactivity and perform associated calculations.
3. Use bonding theories such as molecular orbital theory and hybridization to explain the bonding in transition metal complexes.
4. Apply the principles of electrochemistry in the construction of galvanic and electrolytic cells.
5. Apply the laws of thermodynamics to chemical reactions and chemical equilibrium.
6. Describe specific behavior of various categories of elements on the periodic table.

Topics and Scope:

Lecture Material

1. Chemical Kinetics
2. Nuclear Chemistry and Radioactivity
3. Advanced topics in chemical bonding including transition metal complexes
4. Thermodynamics and Chemical Equilibrium
5. Electrochemistry
6. Descriptive Chemistry
7. Introduction to Organic Chemistry

Laboratory Material

1. Titration

2. Chemical Kinetics
3. Chemical Synthesis
4. Electrochemistry
5. UV-visible spectroscopy
6. The use of computer interfaces for the collection of laboratory data
