Catalog Description:

This is an introductory course in human physiology, organized around body systems and the theme of homeostasis. The course is designed for the beginning student preparing for health-related fields, especially vocational nursing, radiologic technology, massage, or those with a general interest in the function of the human body. This course will minimize the biochemical and quantitative details taught in a general physiology course (e.g., Physiology 1), focusing on the fundamental concepts of physiology. (Not intended for physical education, nursing (RN), or physical therapy majors.)

Prerequisites/Corequisites:**Recommended Preparation:**

Completion of Chem 60. Eligibility for Engl 1A.

Limits on Enrollment:**Schedule of Classes Information:**

Description: Introductory course in human physiology for beginning students preparing for these health-related fields: vocational nursing, radiologic technology, massage, or those with a general

interest in function of the human body. (Not intended for physical education, nursing (RN), or physical therapy majors.) (Grade or P/NP)

Prerequisites/Corequisites:

Recommended: Completion of Chem 60. Eligibility for Engl 1A.

Limits on Enrollment:

Transfer Credit: CSU;

Repeatability: Two Repeats if Grade was D, F, NC, or NP

COURSE CONTENT

Outcomes and Objectives:

Students completing introductory physiology will be able to:

1. Define homeostasis and explain how feedback mechanisms function to maintain homeostasis.
2. Describe the function of the major organ systems of the body, including the nervous, endocrine, muscular, circulatory, respiratory, digestive, urinary, immune, reproductive systems.
3. Identify the roles of the nervous and endocrine systems in regulation of other organ systems.
4. Compare and contrast the basic mechanisms by which organ systems of the body maintain homeostasis.
5. Explain how the structure of cells supports the function of organ systems.
6. Conduct simple physiological experiments using standard laboratory equipment.
7. Apply knowledge about the function of the body to understanding the physiological basis for some of the major diseases and disorders of the human body.

Topics and Scope:

1. Introductory concepts
 - a. scientific method
 - b. levels of biological organization

- c. homeostasis
- 2. Cell structure and function
 - a. macromolecules
 - b. organelles
 - c. cell membranes
 - d. ATP and enzymes
- 3. Control systems: nervous and endocrine
 - a. neurons, membrane potentials, synapses
 - b. structure and function of CNS, PNS, ANS
 - c. sensory receptors, transduction
 - d. endocrine glands, hormones
- 4. Muscle System
 - a. skeletal, cardiac, smooth muscle
 - b. muscle contraction
- 5. Circulatory System
 - a. basic plan of circulation
 - b. cardiac cycle
 - c. blood vessels and blood pressure
 - d. regulation of cardiac output, blood pressure
 - e. basis for heart attack, hypertension, atherosclerosis
- 6. Respiratory System
 - a. ventilation
 - b. gas exchange
 - c. regulation of respiratory rate
 - d. description of chronic obstructive pulmonary disease
- 7. Urinary System
 - a. formation of urine
 - b. regulation of salt and water balance
 - c. regulation of acid - base balance
- 8. Digestive System
 - a. organs and enzymes of digestion
 - b. factors that affect absorption
- 9. Immune System
 - a. injury and infection
 - b. organs, cells and molecules that provide immune defense
- 10. Reproductive System
 - a. organs and hormones involved in sperm production
 - b. organs and hormones of menstrual cycle, pregnancy, parturition, lactation
- 11. Laboratory exercises
 - homeostasis
 - blood chemistry
 - enzyme activity
 - reflex arc
 - senses
 - muscle contraction
 - cardiac function
 - pulmonary function
 - renal function
 - acid base balance
 - glucose tolerance test

Assignment:

1. Read an average of 30-45 pages per week in the text book.
2. Complete laboratory assignments.
3. Written homework based on readings assigned in scientific journals or the text.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written homework, Lab reports

Writing
10 - 40%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Lab reports, Quizzes, Exams

Problem solving
5 - 15%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Class performances, Using electronic instruments

Skill Demonstrations
5 - 15%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion

Exams
20 - 50%

Other: Includes any assessment tools that do not logically fit into the above categories.

Class participation, attendance and cooperation

Other Category
0 - 10%

Representative Textbooks and Materials:

STUDENTS PLEASE NOTE: DO NOT BUY TEXTBOOKS before checking with the SRJC Bookstore. These titles are representative only, and may not be the same ones used in your class.

Lecture:

FUNDAMENTALS OF PHYSIOLOGY: by Lauralee Sherwood, 1995; West Publishers, second edition

Laboratory:

CUSTOMIZED HUMAN PHYSIOLOGY LABORATORY MANUAL, by Susan Wilson, Life Sciences Instructor, 2001.
