# **Catalog Description:**

This is an introductory course in human physiology, organized around body systems and the theme of homeostasis. The course is designed for the beginning student preparing for health-related fields, especially vocational nursing, radiologic technology, massage, or those with a general interest in the function of the human body. This course will minimize the biochemical and quantitative details taught in a general physiology course (e.g., Physiology 1), focusing on the fundamental concepts of physiology. (Not intended for physical education, nursing (RN), or physical therapy majors.)

## **Prerequisites/Corequisites:**

## **Recommended Preparation:**

Completion of Chem 60. Eligibility for Engl 1A.

## **Limits on Enrollment:**

# **Schedule of Classes Information:**

Description: Introductory course in human physiology for beginning students preparing for these health-related fields: vocational nursing, radiologic technology, massage, or those with a general

interest in function of the human body. (Not intended for physical education, nursing (RN), or physical therapy majors.) (Grade or P/NP)

Prerequisites/Corequisites:

Recommended: Completion of Chem 60. Eligibility for Engl 1A.

Limits on Enrollment: Transfer Credit: CSU;

Repeatability: Two Repeats if Grade was D, F, NC, or NP

Certificate Applicable Course

#### **COURSE CONTENT**

# **Outcomes and Objectives:**

Students completing introductory physiology will be able to:

- 1. Define homeostasis and explain how feedback mechanisms function to maintain homeostasis.
- 2. Describe the function of the major organ systems of the body, including the nervous, endocrine, muscular, circulatory, respiratory, digestive, urinary, immune, reproductive systems.
- 3. Identify the roles of the nervous and endocrine systems in regulation of other organ systems.
- 4. Compare and contrast the basic mechanisms by which organ systems of the body maintain homeostasis.
- 5. Explain how the structure of cells supports the function of organ systems.
- 6. Conduct simple physiological experiments using standard laboratory equipment.
- 7. Apply knowledge about the function of the body to understanding the physiological basis for some of the major diseases and disorders of the human body.

# **Topics and Scope:**

- 1. Introductory concepts
  - a. scientific method
  - b. levels of biological organization

- c. homeostasis
- 2. Cell structure and function
  - a. macromolecules
  - b. organelles
  - c. cell membranes
  - d. ATP and enzymes
- 3. Control systems: nervous and endocrine
  - a. neurons, membrane potentials, synapses
  - b. structure and function of CNS, PNS, ANS
  - c. sensory receptors, transduction
  - d. endocrine glands, hormones
- 4. Muscle System
  - a. skeletal, cardiac, smooth muscle
  - b. muscle contraction
- 5. Circulatory System
  - a. basic plan of circulation
  - b. cardiac cycle
  - c. blood vessels and blood pressure
  - d. regulation of cardiac output, blood pressure
  - e. basis for heart attack, hypertension, atherosclerosis
- 6. Respiratory System
  - a. ventilation
  - b. gas exchange
  - c. regulation of respiratory rate
  - d. description of chronic obstructive pulmonary disease
- 7. Urinary System
  - a. formation of urine
  - b. regulation of salt and water balance
  - c. regulation of acid base balance
- 8. Digestive System
  - a. organs and enzymes of digestion
  - b. factors that affect absorption
- 9. Immune System
  - a. injury and infection
  - b. organs, cells and molecules that provide immune defense
- 10. Reproductive System
  - a. organs and hormones involved in sperm production
  - b. organs and hormones of menstrual cycle, pregnancy, parturition,

## lactation

# 11. Laboratory exercises

homeostasis

blood chemistry

enzyme activity

reflex arc

senses

muscle contraction

cardiac function

pulmonary function

renal function

acid base balance

glucose tolerance test

## **Assignment:**

- 1. Read an average of 30-45 pages per week in the text book.
- 2. Complete laboratory assignments.
- 3. Written homework based on readings assigned in scientific journals or the text.

#### Methods of Evaluation/Basis of Grade:

**Writing:** Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written homework, Lab reports

Writing 10 - 40%

**Problem Solving:** Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Lab reports, Quizzes, Exams

Problem solving 5 - 15%

**Skill Demonstrations:** All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Class performances, Using electronic instruments

Skill Demonstrations 5 - 15%

**Exams:** All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion

Exams 20 - 50%

**Other:** Includes any assessment tools that do not logically fit into the above categories.

Class participation, attendance and cooperation

Other Category 0 - 10%

## **Representative Textbooks and Materials:**

STUDENTS PLEASE NOTE: DO NOT BUY TEXTBOOKS before checking with the SRJC Bookstore. These titles are representative only, and may not be the same ones used in your class.
