Total Out of Class Hours: 105.00

Total Student Learning Hours: 157.50

Title 5 Category: AA Degree Applicable

Grading: Grade or P/NP

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly: NRM 10

Catalog Description:
An introduction to principles and techniques for the management and protection of forests and other wild land resources, with an emphasis on the sustainable use of wood, water, forage, recreation and wilderness resources. Includes an examination of contemporary issues affecting the management and preservation of the nation's renewable natural resources for future generations.

Prerequisites/Corequisites:

Recommended Preparation:
Eligibility for ENGL 1A or equivalent

Limits on Enrollment:

Schedule of Classes Information:
Description: Introduction to principles and techniques for the management & protection of forests and other wild land resources. Emphasis on the sustainable use of wood, water, forage, recreation and wilderness resources. (Grade or P/NP)
Prerequisites/Corequisites:

Recommended: Eligibility for ENGL 1A or equivalent
 Limits on Enrollment:
 Transfer Credit: CSU;UC.
 Repeatability: Two Repeats if Grade was D, F, NC, or NP

Certificate/Major Applicable:

Both Certificate and Major Applicable

COURSE CONTENT

Outcomes and Objectives:

Upon completion of this course, the student will be able to:

1. Relate the methods of scientific investigation to natural resources management decisions.
2. Define the nature of scientific inquiry.
3. Describe the values, themes, methods, and history of environmental conservation.
4. Define and discuss terms related to environmental issues.
5. Recognize and identify ecological inter-relationships between living and non-living components of the ecosystem.
6. Make decisions that affect natural resources based on evaluating basic ecological and scientific principles.
7. Recognize characteristics and general distributions of major biomes and determine how humans have impacted each biome.
8. Differentiate between the sources and effects of land degradation and the role of genetic engineering in the future of agriculture.
9. Discuss environmental issues related to Natural Resources Conservation.
10. Summarize historic factors that have contributed to human population growth and to discuss theories of population growth.
11. Describe the major categories and sources of air and water pollution and summarize how these pollutants are hazardous to human health,

- vegetation, and all life on earth.
12. Recognize and assess their influence and potential impacts on our natural resources.
 13. Identify realistic career objectives in environmental conservation.

Topics and Scope:

Unit 1: Introduction

- A. Concepts of Ecology and Sustainability
 1. Ecology as science
 2. Scientific approaches to problems
 3. The ecological imperative
- B. Biological and Physical Principles of Ecosystem Management
 1. Mineral cycling and nutrient uptake
 2. Photosynthesis and energy transfer
 3. Successional patterns of resource ecosystems
- C. Historical Development of Resource Utilization

Unit 2: Soils - Pesticides

- A. Soil Conservation
 1. Geological basis of soil conservation
 2. Physical and chemical properties of soil
 3. Principles of soil classification
 4. Mechanics of soil erosion and application of scientific method for prevention techniques
 5. Soil fertility and plant nutrition relationships
- B. Role of Pesticides
- C. Genetically Modified Organisms

Unit 3: Wildlife and Other Resource Arenas

- A. Forestry and Fire Management
 1. Anatomy and physiology of the living tree
 2. Silvicultural techniques of managed forest stands
 3. Productivity of forests
 - a. measurements
 - b. scientific methodology in forest productivity
 4. Inventory and ownership patterns of forest resources
- B. Range
 1. History of range use in the United States
 2. The biology of the range plant
 3. The biological potential and carrying capacities of native ranges in the United States
 4. Analysis and evaluation of range condition and range trend
 5. Range management techniques
- C. Wildlife Ecology
 1. Principles and characteristics of wildlife populations
 2. Methods of controlling wildlife populations
 3. Principles of habitat management
 4. Economic importance of the fish and game resource
- D. Biodiversity

- E. Wilderness
- F. Outdoor Recreation
- G. Fisheries
 - 1. Aquatic ecology
 - 2. Effects of siltation and pollution on fish populations
 - 3. Commercial and sports fishery management techniques
 - 4. A study of the conflict of uses

Unit 4: Role of Human Populations

- A. Population Dynamics
- B. Population Distribution and Control
- C. Environmental Health
- D. Pollution
- E. Water Resources
 - 1. Analysis of the hydrologic cycle
 - 2. Groundwater and surface water management principles
 - 3. Flood control and water pollution prevention methods
 - 4. The California water picture
 - 5. The State Water Project
 - 6. The Central Valley Project
- F. Energy Resources
 - 1. Energy use and alternative sources
 - 2. Mineral resources availability
 - 3. Resource pollution
- G. Man and Natural Resources
- H. Career Options

Assignment:

1. Applications of scientific method that may include: apply scientific method to the mechanics of soil erosion and prevention techniques and write a 2-page report on results; analyze forest productivity using the scientific method and write a 2-page report on findings; analyze and test hypothesis regarding various range management techniques and write a 2-page report on findings; conduct scientific testing analysis of effects of siltation and pollution on fish populations and write a 2-page report on findings.
2. Reading assignments that will average 20 pages per week.
3. Writing assignments of ten article summaries from natural resource journals. The summaries will total to twenty pages/ 1,000 words during the semester.
4. Book review that will average 5 typed pages.
5. Comprehensive and accurate classroom notes that will average six pages per week.
6. A term paper that will average ten typed pages.
7. Mid-term and final examinations.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Reading reports, Term papers, 5 SUMMARIES FROM JOURNALS

Writing
20 - 40%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Application of scientific method to NR issues.

Problem solving
10 - 20%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations
0 - 0%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion, Short sentence answers.

Exams
50 - 60%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category
0 - 0%
