

BIO 26 Course Outline as of Fall 2009**CATALOG INFORMATION**

Dept and Nbr: BIO 26 Title: BIOLOGY MARINE MAMMALS

Full Title: Biology of Marine Mammals

Last Reviewed: 11/26/2012

Units		Course Hours per Week		Nbr of Weeks	Course Hours Total	
Maximum	4.00	Lecture Scheduled	3.00	17.5	Lecture Scheduled	52.50
Minimum	4.00	Lab Scheduled	3.00	17.5	Lab Scheduled	52.50
		Contact DHR	0		Contact DHR	0
		Contact Total	6.00		Contact Total	105.00
		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 105.00

Total Student Learning Hours: 210.00

Title 5 Category: AA Degree Applicable

Grading: Grade or P/NP

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly: BIO 60

Catalog Description:

Introduction to the biology, natural history, evolution, behavior, anatomy, physiology and population ecology of marine mammals, including whales, dolphins, pinnipeds, otters, manatees and dugongs.

Prerequisites/Corequisites:**Recommended Preparation:**

Eligibility for ENGL 100 or ESL 100

Limits on Enrollment:**Schedule of Classes Information:**

Description: Introduction to the biology, natural history, evolution, behavior, anatomy, physiology and population ecology of marine mammals, including whales, dolphins, pinnipeds, otters, manatees and dugongs. (Grade or P/NP)

Prerequisites/Corequisites:

Recommended: Eligibility for ENGL 100 or ESL 100

Limits on Enrollment:

Transfer Credit: CSU;UC.

Repeatability: Two Repeats if Grade was D, F, NC, or NP

COURSE CONTENT

Outcomes and Objectives:

Upon successful completion of this course, the student will be able to:

1. Describe the features of the class mammalia and compare and contrast the characteristics of the orders and families of marine mammals.
2. Summarize key physical features of the marine environment including light, temperature, pressure, and nutrient distribution.
3. Compare and contrast primary and secondary production levels in major areas of the ocean and explain how this impacts the distribution, population size, and migration patterns of marine mammals.
4. Demonstrate an understanding of systematics and cladistics and apply these concepts to marine mammals.
5. Synthesize the concepts of evolutionary mechanisms, adaptation, and speciation, and apply these concepts to marine mammal evolution.
6. Explain mammalian homeostasis and energetics and the anatomical, physiological, and behavioral adaptations made by marine mammals for life in the sea.
7. Compare and contrast capabilities and functions of the sensory systems (sight, smell, touch, taste, and sound), for different marine mammal groups and their use in communication, social organization, orientation, and feeding.
8. Compare and contrast the various feeding mechanisms of marine mammals and analyze how these differences impact, and are impacted by, the social structure and physiological and morphological adaptations of marine mammals.
9. Compare and contrast the mating and social systems of marine mammals and analyze the role of habitat and evolution in shaping these systems.
10. Summarize past and present threats to marine mammal populations including hunting, pollution, habitat and prey loss and describe and analyze the effectiveness of current national and international laws regulating marine mammal populations.
11. Recognize and describe the marine mammal species found along the California coast and

describe their ecology, natural history, and world population status.

Topics and Scope:

I. Science as a Process

- A. Scientific method
- B. Technique used with marine mammals

II. Marine Mammals- The Group

- A. Mammalian characteristics
- B. Taxonomy, systematics, general characteristics and evolution
 - 1. Cetacea
 - 2. Sirenia
 - 3. "Pinnipeds"
 - 4. Sea otters

III. The Marine Environment

- A. Pressure
- B. Light and temperature
- C. Density and stratification
- D. Stability and turnover
- E. Upwelling and El Nino Southern Oscillating (ENSO) events

IV. Marine Ecology

- A. Primary and secondary production distribution patterns and causes
- B. Food chains, food webs, and trophic hierarchies

V. Evolution of Marine Mammals

- A. Basic genetics including DNA structure, mutations, and heredity
- B. Mechanisms of evolution including natural selection, sexual selection, gene flow and genetic drift
- C. Speciation

VI. Homeostasis and Adaptations For Living in the Marine Environment

- A. Functional morphology
- B. Thermoregulation
- C. Osmoregulation
- D. Diving physiology

VII. Sensory Systems and Communication Between Marine Mammals

- A. Vision in air and water
- B. Sound and hearing in air and water
- C. Taste and smell in air and water
- D. Tactile abilities and communication
- E. Communication within and between species

VIII. Food and Feeding Habits of Marine Mammals

- A. Food and the distribution of marine mammals
- B. Feeding mechanisms
- C. Ecology and evolution of body size
- D. Impact of marine mammal feeding on various marine habitats including a discussion of keystone predators
- E. Migration

IX. Reproduction, Development and Behavior of Marine Mammals

- A. Mating systems
- B. Physiological and behavioral adaptations for gestation, nursing, and weaning
- C. Development of offspring

X. Population Biology

- A. Distributions

- B. Population growth and limiting factors
- XI. Interactions With Humans
 - A. Hunting of all marine mammal species, past and present
 - B. Pollution and biological magnification
 - C. Habitat loss
 - D. National and international regulations
 - E. Marine mammals in captivity: research, entertainment, and military uses
 - F. Conservation efforts

XII. Laboratory Material

- A. Characteristics of the class mammalia
- B. Principles of taxonomy and systematics
- C. Major groups of California marine mammals
 - 1. Cetaceans
 - 2. Pinnipeds
 - 3. Sea otters
- D. Adaptations for a marine existence
 - 1. Morphology
 - 2. Thermoregulatory
 - 3. Osmoregulatory
 - 4. Locomotor
- E. Communication and social structure
- F. Mating systems and care of young
- G. Feeding methods and structures
- H. Field observation techniques and field notes

Assignment:

Assignments may include:

1. Reading scientific papers, handouts, and text assignments (10 - 20 pages per week)
2. Research paper (8-10 pages), written field reports and field notebooks.
3. 2-4 lecture exams, 1 comprehensive final exam, quizzes including identification quiz for local marine mammals
4. Participation in fieldwork including observations, recording and analyzing data, participation in class discussions or group presentations

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written homework including analysis of readings, research paper (8-10 pages) that shows topic coverage and critical analysis, field reports or notebooks

Writing
20 - 50%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Case studies, homework problems, field work: analyzing data

Problem solving
10 - 30%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Animal identification (field or photo based), field work (data recording)

Skill Demonstrations
0 - 20%

Exams: All forms of formal testing, other than skill performance exams.

Essay, short answer, multiple choice, ,matching items, animal ID (field or photo based)

Exams
40 - 60%

Other: Includes any assessment tools that do not logically fit into the above categories.

Participation: class discussion and presentations

Other Category
0 - 10%
