COURSE CONTENT

Outcomes and Objectives:

Upon completion of this course, the student will be able to:

1. Explain the conceptual process of performing a GIS analysis project.
2. Demonstrate comprehensive knowledge of the functionality and applications of GIS technology.
3. Demonstrate high level skills in spatial problem solving and spatial analysis.
4. Perform data research and manipulation.
5. Design, document and present a land planning project using GIS.
6. Describe how GIS applications assist Sonoma County communities improve quality of life through application of GIS principles.
7. Repeating students will utilize new release(s) of GIS software to enhance their skills.

Topics and Scope:

1. Urbanization issues
 - a. Relationship of urbanization in GIS analysis
 - b. Harmony with the earth.
 - c. Managing urbanization with GIS
 - d. Visual images, and data graphics
2. Introduction to raster GIS
 - a. Multivariate data graphics
 - b. Using raster GIS to resolve conflicts between the natural and built environments
 - c. Visualizing relationships with multivariate data graphics
3. Creating map layouts
 - a. Spatial equity and regional integration
 - b. Symbolizing map features
 - c. Communicating with graphics

4. GIS in regional planning
 - a. Review of a model regional plan (eg. Portland, Oregon)
 - b. Analysis of case studies
5. Presentation of GIS data.
6. With repeat: Updated versions of software - methodologies and tools.

Assignment:

1. Read approximately one chapter of the textbook per week
2. Bi-weekly lab assignments using GIS technology
3. Bi-weekly report writing assignments
4. Semester GIS project including problem solving and oral and written report(s)
5. Midterm exam
6. Final exam
7. Repeating students will accomplish assignments utilizing new release(s) of GIS software to enhance their skills.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Reports including research data

Writing
15 - 20%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Semester project

Problem solving
15 - 25%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Demonstration of technology use, biweekly lab assignments, final oral presentation

Skill Demonstrations
40 - 50%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, completion, true-false, short answer, mid-term and final

Exams
20 - 30%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category
0 - 0%

Representative Textbooks and Materials:

Exploring the Dynamic Earth: GIS Investigations for the Earth Sciences, Hall, Michelle K.; Walker, C. Scott; Huth, Anne K.; Butler, Robert F.; Kendall, Larry P.; and Jenness, Jeff S. ArcGIS Edition, Thomson Brooks/Cole, Belmont, California: 2007

Various readings from Internet sites, including, the United States Geological Survey, University of California Berkeley Seismic Lab, and California Institute of Technology (CalTech).
