Catalog Description:

Continuation of Math 8A. Techniques of integration; probability and density functions; differential equations; partial derivatives; optimization with constraints; double integrals; applications; series and Taylor polynomials. For life or social science majors. Students will not receive credit for both Math 8B and Math 1B.

Prerequisites/Corequisites:

Completion of MATH 8A or higher (VF)

Recommended Preparation:

COURSE CONTENT

Outcomes and Objectives:

Upon successful completion of the course, students will be able to:

- 1. Evaluate integrals using various methods of integration, including integration by parts, partial fractions and the use of tables or a computer algebra system.
- 2. Approximate definite integrals using numerical integration.
- 3. Compute variance and analyze probability density functions using integration and differentiation.
- 4. Determine partial derivatives of multivariable functions.
- 5. Analyze series with constant terms using convergence tests.
- 6. Compute and use Taylor polynomials and Taylor series for elementary functions.
- 7. Solve elementary differential equations, including separable and linear differential equations.

Topics and Scope:

Instructional methodology may include, but is not limited to: lecture, demonstrations, oral recitation, discussion, supervised practice, independent study, outside project or other assignments.

- I. L'Hopital's Rule
- II. The Integral

A. Techniques of Integration for Algebraic and Trigonometric

Functions

- 1. Substitution
- 2. Parts
- 3. Tables
- 4. Numerical Methods
- B. Improper Integrals
- C. Applications
 - 1. Area and Volume
 - 2. Average Value
 - 3. Present Value
- III. Probability and Density Functions
 - A. Continuous Random Variables
 - B. Expected Value
 - C. Variance
 - D. Probability Density Functions
- IV. Multivariable Calculus
 - A. Analytical Geometry in 3-D
 - B. Functions of Several Variables
 - C. Level Curves
 - D. Partial Differentiation
 - E. Optimization and Constrained Optimization
 - F. Double Integrals
 - G. Applications
- V. Sequences and Series
 - A. Convergence and Tests
 - 1. P-series
 - 2. Ratio Test
 - B. Power Series
 - 1. Taylor's Theorem
 - 2. Taylor Polynomials
- C. Newton's Method
- VI. Differential Equations
 - A. Solutions to Differential Equations
 - B. Separation of Variables
 - C. First-order Linear Differential Equations
 - D. Applications

Assignment:

- 1. Daily reading outside of class (approximately 0-50 pages per week).
- 2. Homework assignments (10-35).
- 3. Exams (3-5) and quizzes (0-6).
- 4. Projects (0-2).

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments are more appropriate for this course.

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework assignments

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Exams: All forms of formal testing, other than skill performance exams.

Problem solving exams, objective exams and quizzes

Other: Includes any assessment tools that do not logically fit into the above categories.

Projects

0 - 10%

Representative Textbooks and Materials:

Brief Calculus With Applications (7th ed.). Larson, Ron; Hostetler, Robert; Edwards, Bruce. Houghton-Mifflin: 2006.

Writing 0 - 0%

Problem solving 5 - 20%

Skill Demonstrations 0 - 0%

Exams

70 - 95%
