Catalog Description:

Solar System astronomy laboratory involves the analysis and interpretation of astronomical data. Using collaborative activities, photos, spectra, as well as direct observations, the student will arrive at conclusions concerning fundamental properties of the Solar System, comparative planetology, and planetary atmospheres.

Prerequisites/Corequisites:

Course Completion or Current Enrollment in ASTRON 4

Recommended Preparation:**Limits on Enrollment:****Schedule of Classes Information:**

Description: Solar System astronomy laboratory involves the analysis and interpretation of astronomical data. Using collaborative activities, photos, spectra, as well as direct observations, the student will arrive at conclusions concerning fundamental properties of the Solar System, comparative planetology, and planetary atmospheres. COURSE CONTENT

Outcomes and Objectives:

Upon completion of this course the student will:

1. Graph, analyze, and interpret planetary data.
2. Compare and contrast the planets and satellites within our Solar System.
3. Apply the fundamental properties of gravitation to draw conclusions concerning the physical characteristics and motions of planets and satellites.
4. Explain the observational techniques that are used to compute the distances, orbits, atmospheres, motions, compositions, and masses of planets and satellites.
5. Construct a model of the Earth-Moon-Sun system and utilize it to predict and explain lunar phases.
6. Identify the physical principles involved in the formation and retention of planetary atmospheres.
7. Discuss the observation techniques used to discover and study extra-solar planets.
8. Compute the rotation rate and mass of the Sun.
9. Describe the techniques used to determine the ages of planetary and satellite surfaces.

Topics and Scope:

- I. Overview of the scientific method
- II. Distances, scales and units of measure
- III. Planetary motion and gravity
 - A. Kepler's laws of planetary motion
 - B. Newtonian laws of motion and gravity
 - C. Calculating surface gravities of planets
- IV. Terrestrial planets
 - A. Atmospheres, surface features, and other properties

- B. Seasons
- C. Life-planet relationships
- D. Evidence of liquid water
- V. Jovian planets
 - A. Atmosphere, interior structure, and other properties
 - B. Satellites
 - C. Planetary ring systems and Roche's Limit
- VI. Pluto and other dwarf planets
- VII. Comets and meteor showers
 - A. Anatomy of a comet
 - B. Cometary orbits
 - C. Comet-meteor relationships
 - D. Meteors and meteor showers
- VIII. Asteroids and meteorites
 - A. Asteroid classification
 - B. Impacts
 - C. Meteorite classification
- IX. The Moon
 - A. Delay in rise/set
 - B. Phases
 - C. Surface and interior
 - D. Orbit
 - E. Geologic history
- X. Eclipses
 - A. Types of shadows
 - B. Lunar eclipses
 - C. Solar eclipses
 - D. Eclipse seasons and future eclipses
- XI. The Sun
 - A. Solar interior and atmosphere
 - B. Nuclear fusion
 - C. Photosphere and sunspots
- XII. The origin of the Solar System
 - A. Nebular hypothesis
 - B. Age of the Solar System
- XIII. Extra-solar planets

Additional topics may include:

- XIV. Earth and sky
 - A. Celestial sphere
 - B. Diurnal and annual motion
- XV. Constellations and mapping
 - A. Star charts and planispheres
 - B. Terrestrial and celestial coordinate systems
- XVI. Optical systems
 - A. Image formation
 - B. Lenses and mirrors
 - C. Telescope types
 - D. Cameras

Assignment:

1. Exams, 1-4
2. Quizzes, 0-15
3. Weekly reading assignments, 5-10 pages/week
4. Laboratory assignments, 10-20
5. Outdoor observation reports, 1-5

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Observation reports

Writing
10 - 40%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Laboratory assignments

Problem solving
20 - 50%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations
0 - 0%

Exams: All forms of formal testing, other than skill performance exams.

Objective examinations (multiple choice, true/false, short answer), Quizzes

Exams
10 - 40%

Other: Includes any assessment tools that do not logically fit into the above categories.

Attendance and participation

Other Category
0 - 20%
