COURSE CONTENT

Outcomes and Objectives:

Upon completion of this course, students will be able to:

1. Describe physical examination and triage in an emergency medicine context
2. Describe typical emergency patient care as would be required to be functional member of a treatment team and effective client communication
3. Explain the use of laboratory tests and imaging techniques in emergency medicine
4. Discuss the unique husbandry and supportive medicine needs of emergency and unstable patients including fluid therapy, nutritional therapy, pain management, and ICU patient monitoring
5. Identify the physiologic mechanisms and effects of cardiovascular shock and discuss the rationale of current treatment protocols
6. Describe and recognize cardiopulmonary arrest and discuss current treatment protocols including CPR (Cardiopulmonary Cerebral Resuscitation)
7. Discuss the recognition and treatment of respiratory aspect of emergencies including a variety of administrations of oxygen therapy
8. Identify the events and phases of normal wound healing and discuss the principles of wound therapy
9. Describe the general principles and techniques of trauma management including wound healing and bandaging.
10. Describe the recognition and treatment of common emergencies on a system basis including gastrointestinal, ophthalmologic, neurologic, metabolic, and hematologic emergencies and toxicoses.
11. Identify normal and abnormal parturition patterns and discuss typical dystocia management including neonatal care

Topics and Scope:

1. The Emergency Examination

- a. Phone triage and client communication
- b. Common problems requiring immediate treatment
- c. Triage and physical examination
- d. Role of veterinary team members in emergency patient care
- e. Diagnostic testing in an emergency context
2. Emergency Patient Care
 - a. Monitoring equipment
 - b. Pain assessment and analgesics
 - c. Fluid therapy and intensive care catheterization
 - d. Oxygen therapy and airway management
 - e. Cardiovascular monitoring including electrocardiograms and central venous pressure
 - f. Wound healing and bandaging
 - g. Neurologic assessment and acute central nervous system injury
 - h. Nutritional needs and support of intensive patients
 - i. Common medications in emergency medicine
 - j. Calculations for emergency medicine
3. Specific conditions
 - a. Cardiovascular shock
 - b. Cardiopulmonary arrest and CPR
 - c. Trauma and injury assessment
 - d. Dystocia and reproductive emergencies
 - e. Neonatal care
 - f. Toxicoses and decontamination
 - g. Emergency endocrine and metabolic conditions
 - h. Acute ophthalmologic injury, care, and treatment
 - i. Coagulopathies and hematologic emergencies

Assignment:

1. Reading in texts and handouts (20-40 pages/week)
2. Reading, summarizing, and answering questions regarding case studies or emergency protocols
3. Performance of mock exercises in emergency or ICU patient care
4. Creation and evaluation of emergency medicine protocols
5. Quizzes (up to 10), midterms (up to 2) and final exam

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written homework; case report

Writing 10 - 20%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

None

Problem solving 0 - 0%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Class performances, presentations (optional)

Skill Demonstrations
10 - 20%

Exams: All forms of formal testing, other than skill performance exams.

Exams to include multiple choice, true/false, matching items, completion, identification, case study comprehension

Exams
50 - 80%

Other: Includes any assessment tools that do not logically fit into the above categories.

Participation

Other Category
0 - 10%
