**Catalog Description:**

Continuation of Math 8A. Techniques of integration; probability and density functions; differential equations; partial derivatives; optimization with constraints; double integrals; applications; series and Taylor polynomials. For life or social science majors. Students will not receive credit for both Math 8B and Math 1B.

**Prerequisites/Corequisites:**

Completion of MATH 8A or higher (VF)

**Recommended Preparation:****Limits on Enrollment:****Schedule of Classes Information:**

Major Applicable Course

## **COURSE CONTENT**

**Outcomes and Objectives:**

Upon successful completion of the course, students will be able to:

1. Evaluate integrals using various methods of integration, including integration by parts, partial fractions and the use of tables or a computer algebra system.
2. Approximate definite integrals using numerical integration.
3. Compute variance and analyze probability density functions using integration and differentiation.
4. Determine partial derivatives of multivariable functions.
5. Analyze series with constant terms using convergence tests.
6. Compute and use Taylor polynomials and Taylor series for elementary functions.
7. Solve elementary differential equations, including separable and linear differential equations.

**Topics and Scope:**

Instructional methodology may include, but is not limited to: lecture, demonstrations, oral recitation, discussion, supervised practice, independent study, outside project or other assignments.

I. L'Hopital's Rule

II. The Integral

A. Techniques of Integration for Algebraic and Trigonometric

- Functions
  - 1. Substitution
  - 2. Parts
  - 3. Tables
  - 4. Numerical Methods
- B. Improper Integrals
- C. Applications
  - 1. Area and Volume
  - 2. Average Value
  - 3. Present Value
- III. Probability and Density Functions
  - A. Continuous Random Variables
  - B. Expected Value
  - C. Variance
  - D. Probability Density Functions
- IV. Multivariable Calculus
  - A. Analytical Geometry in 3-D
  - B. Functions of Several Variables
  - C. Level Curves
  - D. Partial Differentiation
  - E. Optimization and Constrained Optimization
  - F. Double Integrals
  - G. Applications
- V. Sequences and Series
  - A. Convergence and Tests
    - 1. P-series
    - 2. Ratio Test
  - B. Power Series
    - 1. Taylor's Theorem
    - 2. Taylor Polynomials
  - C. Newton's Method
- VI. Differential Equations
  - A. Solutions to Differential Equations
  - B. Separation of Variables
  - C. First-order Linear Differential Equations
  - D. Applications

**Assignment:**

1. Daily reading outside of class (approximately 0-50 pages per week).
2. Homework assignments (10-35).
3. Exams (3-5) and quizzes (0-6).
4. Projects (0-2).

**Methods of Evaluation/Basis of Grade:**

**Writing:** Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments are more appropriate for this course.

Writing  
0 - 0%

**Problem Solving:** Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework assignments

Problem solving  
5 - 20%

**Skill Demonstrations:** All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations  
0 - 0%

**Exams:** All forms of formal testing, other than skill performance exams.

Problem solving exams, objective exams and quizzes

Exams  
70 - 95%

**Other:** Includes any assessment tools that do not logically fit into the above categories.

Projects

Other Category  
0 - 10%

**Representative Textbooks and Materials:**

Brief Calculus With Applications (7th ed.). Larson, Ron; Hostetler, Robert; Edwards, Bruce. Houghton-Mifflin: 2006.
