

ELEC 54A Course Outline as of Fall 2018**CATALOG INFORMATION**

Dept and Nbr: ELEC 54A Title: DC AND AC THEORY

Full Title: Direct and Alternating Current Theory

Last Reviewed: 5/8/2023

Units		Course Hours per Week		Nbr of Weeks	Course Hours Total	
Maximum	3.00	Lecture Scheduled	2.00	17.5	Lecture Scheduled	35.00
Minimum	3.00	Lab Scheduled	3.00	8	Lab Scheduled	52.50
		Contact DHR	0		Contact DHR	0
		Contact Total	5.00		Contact Total	87.50
		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 70.00

Total Student Learning Hours: 157.50

Title 5 Category: AA Degree Applicable

Grading: Grade Only

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly:

Catalog Description:

Introduction to electronic components and underlying physics concepts, electrical units, direct current (DC), DC circuit analysis, batteries, magnetism, meters, alternating current (AC), capacitance, inductance, transformers, and AC circuit analysis.

Prerequisites/Corequisites:

Completion of ELEC 51A or

Course Completion of Math 150B, or Math 151 or higher; or Qualifying Placement from Math Assessment.

See Student Success & Assessment Services for more information about the assessment process.

Recommended Preparation:

Eligibility for ENGL 100 or ESL 100

Limits on Enrollment:**Schedule of Classes Information:**

Description: Introduction to electronic components and underlying physics concepts, electrical units, direct current (DC), DC circuit analysis, batteries, magnetism, meters, alternating current (AC), capacitance, inductance, transformers, and AC circuit analysis. (Grade Only)

Prerequisites/Corequisites: Completion of ELEC 51A or Course Completion of Math 150B, or Math 151 or higher; or Qualifying Placement from Math Assessment.
 See Student Success & Assessment Services for more information about the assessment process.
 Recommended: Eligibility for ENGL 100 or ESL 100
 Limits on Enrollment:
 Transfer Credit: CSU;
 Repeatability: Two Repeats if Grade was D, F, NC, or NP

Both Certificate and Major Applicable

COURSE CONTENT

Outcomes and Objectives:

During this course students will:

1. Use algebraic functions, signed numbers and metric notations, make circuit calculations using Ohm's Law, Watt's Law and Kirchoff's Laws.
2. Use algebraic expressions and numerical representations to analyze and evaluate series, parallel, and series-parallel circuits.
3. Summarize the basic characteristics of magnetism.
4. Identify alternating current (AC) units.
5. Use signed numbers to calculate values in an AC resistive circuit.
6. Identify and describe the characteristics of capacitors, inductors and transformers using trigonometric functions.
7. Analyze and evaluate resistor-capacitor (RC), resistor-inductor (RL) and resistor-inductor-capacitor (RLC) circuits through the application of right angle trigonometry and geometry.

Topics and Scope:

- I. Atoms
 - A. Bohr model structure
 - B. Quantum mechanical model structure
- II. Review of Elementary Algebra
- III. Basic Laws of Physics
 - A. Ohm's law
 - B. Watt's law
 - C. Kirchoff's laws

IV. Direct Current (DC) Circuits

- A. Digital volt meters
- B. Series circuits
- C. Parallel circuits
- D. Series-parallel circuits

V. Unloaded voltage dividers

VI. Conductors and insulators

VII. Control components

- A. Switches
- B. Fuses
- C. Circuit breakers

VIII. Resistors, Fixed and Variable

IX. Batteries

X. Magnetism

XI. Right Angle Trigonometry

XII. Alternating Current (AC)

- A. Oscilloscope operation
- B. Frequency
- C. Sine wave values

XIII. Capacitors and Capacitance

- A. Resistor-capacitor (RC) time constant
- B. Capacitive reactance
- C. RC circuit impedance
 - 1. series
 - 2. parallel
 - 3. series-parallel

XIV. Inductors and Inductance

- A. Resistor-inductor (RL) time constant
- B. Inductive reactance
- C. RL circuit impedance
 - 1. series
 - 2. parallel
 - 3. series-parallel

XV. Resistor, Inductor, Capacitor (RLC) Circuits

- A. Series
- B. Parallel
- C. Admittance, conductance and susceptance
- D. Transformers

All subjects are covered in both lecture and lab portions of the course.

LABORATORY MATERIAL

I. Ohm's Law simple circuits

II. Series Circuits - Kirchoff's Laws, Watt's Law, & Ohm's Law. Voltage dividers

III. Parallel Circuits - Kirchoff's Laws, Watt's Law, & Ohm's Law. Current dividers

IV. Complex Circuits - Kirchoff's Laws, Watt's Law, & Ohm's Law. Maximum Power Transfer.

V. Basic oscilloscope and multimeter operation and measurements

VI. Resistor - Capacitor (RC) circuits, impedance measurements & calculations including RC time constant

VII. Resistor - Inductor (RL) circuits, impedance measurements & calculations

VIII. RLC circuits - impedance measurements & calculations

Assignment:

Lecture-Related Assignments:

1. Textbook readings, 20 - 30 pages per week.
2. Homework assignments (10-15)
3. Lab reports (8-14)
4. Quizzes (4-8)
5. Final exam: objective examination including multiple choice, true/false, matching items, completion, and objective/essay questions
6. Lab skills test

Lab-Related Assignments:

1. Lab assignments (8-14)

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Lab reports

Writing
20 - 30%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problems, lab assignments

Problem solving
30 - 40%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Lab skills test

Skill Demonstrations
10 - 20%

Exams: All forms of formal testing, other than skill performance exams.

Quizzes and final exam

Exams
30 - 40%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category
0 - 0%
