#### **Catalog Description:**

Introductory computer architecture and techniques of assembly language programming as they apply to modern microprocessors such as I-86, ARM and/or PowerPC. Topics include theory and concepts of virtual memory, pipelines, caches, and multitasking, hardware architecture (bus, memory, stack, I/O, interrupts), design of structured assembly language code, use of software interrupts, survey arithmetic notations (binary, hexadecimal, floating- point, binary-coded decimal), input/output, and disk processing concepts.

#### **Prerequisites/Corequisites:**

Course Completion of CS 10B

#### **Recommended Preparation:**

# **COURSE CONTENT**

### **Student Learning Outcomes:**

Upon completion of the course, students will be able to:

- 1. Describe concepts of virtual memory, pipelines, caches, and multitasking, hardware architecture (bus, memory, stack, Input/Output (I/O), interrupts).
- 2. Apply structured assembly language code, use of software interrupts, survey arithmetic notations (binary, hexadecimal, floating- point, binary-coded decimal), input/output, and disk processing concepts.
- 3. Code, assemble, link, and debug Assembly Language programs, including an interrupt handler.
- 4. Demonstrate how fundamental high-level programming constructs are implemented at the machine-language level.

### **Objectives:**

Upon completion of the course, students will be able to:

- 1. Distinguish and categorize the architectural components of a microcomputer.
- 2. Apply microcomputer design principles to identify architectural components of the Intel family of microprocessors and demonstrate ability to utilize microcomputer capabilities through assembly language programs.
- 3. Create a complete set of source modules using standard design tools.
- 4. Prepare executable assembly language programs which include at least one subroutine library module.
- 5. Create programs which carry out binary arithmetic operations, floating-point, and BCD (binary-coded decimal).
- 6. Demonstrate ability to convert numbers to and from decimal, binary, octal, and hexadecimal.
- 7. Use three BIOS (basic input-output system).
- 8. Write an interrupt handler.

### **Topics and Scope:**

- I. Assembly Language Environment
  - A. Software design process
  - B. Programming tools
    - 1. editors
    - 2. assemblers
    - 3. debuggers
    - 4. source modules
  - C. Hardware environment
    - 1. networking
    - 2. workstations
    - 3. peripheral devices
  - D. Assembly language overview
    - 1. general syntax notation
    - 2. instruction categories
    - 3. high-level language interface
    - 4. sub-routine library modules
- II. Data Types and Number System
  - A. Numeric data
    - 1. number system
      - a. binary, decimal, octal, hexadecimal
      - b. number system conversions
    - 2. arithmetic notation
      - a. binary, signed and unsigned
      - b. floating point
      - c. two's complement
      - d. BCD (binary-coded decimal)
  - B. Character data
  - C. ASCII (American Standard Code for Information Interchange) character set
- III. Computer Architecture
  - A. Microprocessors
  - B. Data, control, address bus
  - C. Registers
  - D. Memory
  - E. Stack
  - F. Interrupts
  - G. Peripheral device I/O

- H. Virtual memory
- I. Pipelines and caches
- J. CISC (complex instruction set computer) versus RISC (reduced instruction set computer)
- IV. Instruction Set
  - A. Addressing modes
  - B. Data transfer instructions
  - C. Software interrupt structure
  - D. Arithmetic operations
  - E. Control structures
  - F. Stack operations
  - G. String operations
- V. Peripheral Device Access
  - A. Graphics displays
  - B. Disk I/O
  - C. Standard list device
- VI. Von Neumann Machine

#### Assignment:

- 1. Read approximately 25 pages per week from textbook
- 2. Programming exercises:
  - a. Hierarchy charts and structured flowcharts
  - b. Code, assemble, link, and debug approximately 10 Assembly Language programs, including an interrupt handler
- 3. Write technical documentation to accompany programs
- 4. Two to four quizzes and exams

### Methods of Evaluation/Basis of Grade:

**Writing:** Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written documentation

**Problem Solving:** Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Programming exercises

**Skill Demonstrations:** All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

**Exams:** All forms of formal testing, other than skill performance exams.
