### **COURSE CONTENT**

#### **Student Learning Outcomes:**

At the conclusion of this course, the student should be able to:

1. Examine the process of health behavior change and initiate a plan to improve one's personal health behavior.
2. Analyze current health issues concerning lifestyle and total health and recognize how they impact the individual, the environment, and society as a whole.
3. Apply health behavior change theories to life situations and decisions related to fitness, stress, mental health, substance use, physical fitness, nutrition, environmental issues, and other health topics.

#### **Objectives:**

Upon completion of this course, students will be able to:

1. Explain health behavior theories and their application to everyday life situations and decisions.
2. Investigate the most significant contemporary determinants of optimal health.
3. Describe various dimensions of health.
4. Review aspects of mental health, adverse childhood experiences, and their impact on overall wellness.
5. Discuss the nature of stress, stress management, and diseases related to stress.
6. Assess personal health status and influences of lifestyle on current and future well-being.
7. Analyze the effects of use, abuse and addiction to medications, drugs, alcohol, and tobacco on health.
8. Demonstrate knowledge of the prevention and treatment of chronic and infectious diseases.
9. Demonstrate knowledge of the principles of nutrition and physical fitness and their relationship to safe and effective weight control.

10. Describe effective methods of communication and the role communication plays in relationships.
11. Relate concepts of human sexuality to, reproductive choices, aging, health and wellness.
12. Evaluate the relationships between environmental concerns and the future health and well being of the individual and society.
