CIS 55.11C Course Outline as of Spring 2009

CATALOG INFORMATION

Dept and Nbr: CIS 55.11C Title: LAN SWITCHING Full Title: LAN Switching (Cisco Networking 3) Last Reviewed: 5/11/2015

Units		Course Hours per Week		Nbr of Weeks	Course Hours Total	
Maximum	3.00	Lecture Scheduled	3.00	17.5	Lecture Scheduled	52.50
Minimum	3.00	Lab Scheduled	0	8	Lab Scheduled	0
		Contact DHR	0		Contact DHR	0
		Contact Total	3.00		Contact Total	52.50
		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 105.00

Total Student Learning Hours: 157.50

Title 5 Category:	AA Degree Applicable
Grading:	Grade Only
Repeatability:	00 - Two Repeats if Grade was D, F, NC, or NP
Also Listed As:	
Formerly:	

Catalog Description:

Students develop an in-depth understanding of how switches operate and are implemented in the local area network (LAN) environment for small and large networks. Beginning with a foundational overview of Ethernet, this course provides detailed explanations of LAN switch operation, virtual local area network (VLAN) implementation, Rapid Spanning Tree Protocol (RSTP), VLAN Trunking Protocol (VTP), Inter-VLAN routing, and wireless network operations. Students analyze, configure, verify, and troubleshoot VLANs, RSTP, and VTP. Campus network design and Layer 3 switching concepts are introduced.

Prerequisites/Corequisites:

Course Completion of CS 82.21B (or CIS 55.11B)

Recommended Preparation:

Eligibility for ENGL 100 or ESL 100

Limits on Enrollment:

Schedule of Classes Information:

Description: Students develop an in-depth understanding of how switches operate and are implemented in the local area network (LAN) environment for small and large networks.

Beginning with a foundational overview of Ethernet, this course provides detailed explanations of LAN switch operation, virtual local area network (VLAN) implementation, Rapid Spanning Tree Protocol (RSTP), VLAN Trunking Protocol (VTP), Inter-VLAN routing, and wireless network operations. Students analyze, configure, verify, and troubleshoot VLANs, RSTP, and VTP. Campus network design and Layer 3 switching concepts are introduced. (Grade Only) Prerequisites/Corequisites: Course Completion of CS 82.21B (or CIS 55.11B) Recommended: Eligibility for ENGL 100 or ESL 100 Limits on Enrollment: Transfer Credit: CSU; Repeatability: Two Repeats if Grade was D, F, NC, or NP

COURSE CONTENT

Outcomes and Objectives:

Upon completion of this course, students will be able to:

- 1. Explain the history and development of Ethernet technologies
- 2. Examine the basic functions and operations of a Local Area Network (LAN) switch
- 3. Experiment with Cisco Discovery Protocol (CDP)
- 4. Summarize the inner functions of a LAN switch
- 5. Compare and contrast various campus data network design schemes
- 6. Build and manage basic LAN switch configurations
- 7. Organize Virtual Local Area Networks (VLANs)

8. Solve VLAN redundant topology problems with Rapid Spanning Tree Protocol (RSTP)

9. Manage and modify VLANs within a domain using Trunking and VLAN Trunking Protocol (VTP)

10. Effect Inter-VLAN routing by configuring a router with virtual sub-interfaces

Topics and Scope:

Topics will include but not be limited to:

I. Ethernet in-depth

- A. The history of Ethernet
- B. Framing and encapsulating packets
- C. Ethernet Operation
 - 1. Rules governing when a device can transmit
 - 2. Full duplex, half duplex and collision domains
- D. Ethernet technologies
 - 1. 10- and 100Mbps
 - 2. Gigabit Ethernet
 - 3. The future of Ethernet
- II. Switching Concepts Cisco IOS Software and Cisco Discovery Protocol (CDP)
 - A. Local Area Network (LAN) switching
 - B. Basic switching and bridging operation of a switch
 - 1. The forwarding and filtering process
 - 2. Symmetric and asymmetric switching
 - C. Communication between switches and workstations
 - D. Discovering neighbors using CDP
 - 1. Information learned by CDP
 - 2. Configuration, verification and troubleshooting CDP commands
- III. Inside the Switch
- A. Layer 2 addresses and broadcasts
- B. Switch internal processing
 - 1. Latency
 - 2. Forwarding methods
- C. The Cisco switch Content Addressable Memory (CAM)
- IV. Campus Network Design
- A. Design principles
- B. Modular network design
 - 1. Hierarchical network design models
 - 2. The enterprise composite network model
- V. Basic Switch Configuration
- A. Startup of the Catalyst switch
- B. Logging on with the Command Line Interface (CLI)
- C. Basic switch configuration commands
- D. Managing configuration files and password recovery
- VI. Virtual Local Area Networks (VLANs) and IP Telephony Basics
- A. Broadcast domains with VLANs and routers
- B. Configuring, verifying and troubleshooting static VLANs
- C. Managing a separate VLAN for a Voice over IP (VoIP) telephone system
- VII. Rapid Spanning Tree Protocol (RSTP)
- A. Redundant topologies for fault tolerance
- B. Problems with redundant topologies
 - 1. Loops, broadcasts storms, database instability
 - 2. Broadcasts storms
 - 3. Database instability
- C. RSTP as a software solution to a hardware problem
- VIII. Trunking and VLAN Trunking Protocol (VTP)
 - A. Multiple signal sources across a single link or trunk line
 - B. Configuring trunks with the IEEE 802.1Q protocol
 - C. Maintaining VLANs within a domain with VTP
- D. Configuring VTP
- IX. Inter-VLAN Routing
 - A. Communication between VLANs requires a router or multilayer switch

B. Configuring a router with virtual sub-interfaces (Router-on-a-stick)

Assignment:

Reading assignments may include:

- 1. Online research of network devices and deployment practices
- 2. Approximately 50 pages weekly from the textbook

Homework problems may include:

- 1. Hands-on exercises to demonstrate proficiency with each topic
- 2. Online quizzes
- 3. Creation of network design diagrams

Other assignments may include:

- 1. Objective examinations and quizzes
- 2. Skill demonstration examinations
- 3. Classroom scenario based exercises

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments and skill demonstrations are more appropriate for this course.

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problems, Creation of network design diagrams and layouts

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Class performances, Performance exams, Network device configuration

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion, Simulated equipment configuration

Other: Includes any assessment tools that do not logically fit into the above categories.

Writing 0 - 0%

Problem solving 15 - 30%

Skill Demonstrations 20 - 30%

Exams 20 - 30% Attendance and participation in scenario based exercises
