**Catalog Description:**

A survey of fundamental game development techniques. The basics of artificial intelligence, animation, 2D and 3D real-time rendering, and collision detection/response are covered through the development of a game engine written in JavaScript. Students in this class will collaborate to develop games using a realistic industry workflow, from conception through completion. This course also addresses professional issues, such as creating resumes and portfolios, technical interviews, and finding engineering jobs within the games industry.

**Prerequisites/Corequisites:**

Course Completion of CS 42 ( or CS 74.42 or CS 74.42A)

**Recommended Preparation:**

Eligibility for ENGL 100 or ESL 100

**Limits on Enrollment:****Schedule of Classes Information:**

**Certificate/Major Applicable:**

Both Certificate and Major Applicable

## **COURSE CONTENT**

### **Outcomes and Objectives:**

Upon completion of the course, students will be able to:

1. Solve artificial intelligence, rendering, and animation problems.
2. Create video games of moderate complexity.
3. Discuss common workflow practices in the games industry.
4. Craft compelling resumes and portfolios.
5. Prepare for rigorous and technical interview process.

### **Topics and Scope:**

#### I. Animation

- A. Frame-based animation
- B. Elapsed game time vs. real time
- C. Particle systems

#### II. Rendering

- A. Programmable graphics hardware
  1. Graphics Processing Unit (GPU) architecture summary
  2. GLSL and HLSL
  3. Vertex, pixel, geometry, and compute shaders
- B. The CUP side
  1. Feeding the animal - getting the GPU to draw stuff
  2. Renderer architecture and performance considerations

#### III. Data Driven Development

- A. Ways to define your data
  - B. Extensible Mark-up Language (XML)
- IV. Gameplay Engineering
- A. Save and load game state
  - B. User interface
  - C. Heads-up display
  - D. Collision detection and response
- V. Industry Workflow
- A. Standard workflows and source control
  - B. Collaboration with artists and designers
  - C. Technical interviews
  - D. Technical resumes
  - E. Portfolio development
  - F. Milestones for game development
    - 1. Concept document
    - 2. Game design document
    - 3. Technical design document
    - 4. Prototype
    - 5. Production
    - 6. Alpha
    - 7. Beta
    - 8. Gold
- VI. Professional Issues
- A. Creating resumes and portfolios
  - B. Technical interviews
  - C. Preparation for and finding engineering jobs within the game industry

**Assignment:**

1. Read approximately 25-30 pages a week
2. Weekly project milestones: students solve iterative programming and workflow problems
3. Prepare sample questions for technical interviews
4. In-class technical interviews: students will interview each other
5. Preparation of a sample resume and portfolio website
6. Written concept, game design, and technical documentation for a team based final project
7. Final project: a working game that demonstrates the use of the techniques developed in this class

**Methods of Evaluation/Basis of Grade:**

**Writing:** Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written concept and technical documentation	Writing 10 - 20%
---	---------------------

**Problem Solving:** Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Interactive programming, game design, and workflow problems

Problem solving  
30 - 40%

**Skill Demonstrations:** All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

In-class technical interviews and final project

Skill Demonstrations  
50 - 50%

**Exams:** All forms of formal testing, other than skill performance exams.

None

Exams  
0 - 0%

**Other:** Includes any assessment tools that do not logically fit into the above categories.

None

Other Category  
0 - 0%
