ENGR 45 Course Outline as of Fall 2021

CATALOG INFORMATION

Dept and Nbr: ENGR 45 Title: PROP OF MATERIALS

Full Title: Properties of Materials

Last Reviewed: 1/25/2021

Units		Course Hours per Week		Nbr of Weeks	Course Hours Total	
Maximum	4.00	Lecture Scheduled	3.00	17.5	Lecture Scheduled	52.50
Minimum	4.00	Lab Scheduled	3.00	8	Lab Scheduled	52.50
		Contact DHR	0		Contact DHR	0
		Contact Total	6.00		Contact Total	105.00
		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 105.00 Total Student Learning Hours: 210.00

Title 5 Category: AA Degree Applicable

Grading: Grade Only

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly:

Catalog Description:

Structure, properties, selection, utilization, and deterioration of engineering materials.

Prerequisites/Corequisites:

Course Completion of PHYS 40 AND; Course Completion of CHEM 3A AND CHEM 3AL; OR CHEM 1A

Recommended Preparation:

Limits on Enrollment:

Schedule of Classes Information:

Description: Structure, properties, selection, utilization, and deterioration of engineering

materials. (Grade Only)

Prerequisites/Corequisites: Course Completion of PHYS 40 AND; Course Completion of CHEM

3A AND CHEM 3AL; OR CHEM 1A

Recommended:

Limits on Enrollment: Transfer Credit: CSU;UC. Repeatability: Two Repeats if Grade was D, F, NC, or NP

SRJC Equivalent Course(s): ENGR45

Certificate/Major Applicable:

Major Applicable Course

COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

- 1. Describe classification, properties and theories related to the behaviors of various materials.
- 2. Apply mechanical, thermal and electrical techniques to characterize and/or manipulate properties of materials.

Objectives:

At the conclusion of this course, the student should be able to:

- 1. Describe the fundamental concepts related to atomic theory, the periodic table and bonding types/forces.
- 2. Apply various crystal systems, Miller Indices and x-ray diffraction methods to the evaluation of solids.
- 3. Describe all types of defects in solids, determine their densities and explain their effects on the properties of materials.
- 4. Explain different diffusion mechanisms.
- 5. Apply various mechanical testing methods to different materials.
- 6. Use the dislocation concept to explain the strengthening mechanism and heat treatment of materials.
- 7. Identify various modes of failure, their mechanisms, and factors affecting their rate.
- 8. Analyze binary phase diagrams of various alloys and Temperature Time Transition (TTT) diagram for steel and their application for processing of metals.
- 9. Describe the properties of nonferrous metals, ceramics, polymers and composites.
- 10. Explain basic electrical, thermal, optical and magnetic properties of materials.
- 11. Explain the types of corrosion mechanisms, the factors affecting the rate of corrosion, and the methods of protection against corrosion.

Topics and Scope:

1. Classification of engineering materials

- 2. Atomic structure and the periodic table
- 3. Chemical bonding and intermolecular forces
- 4. Space lattices and atomic arrangements
- 5. Vacancies, impurities, and dislocations in atomic arrangement
- 6. Diffusion in materials
- 7. Mechanical properties of materials
- 8. Deformation, work hardening, and annealing of materials
- 9. Nucleation and grain growth and their effect on strength
- 10. Phase diagrams and TTT
- 11. Solid solution strengthening and dispersion strengthening
- 12. Heat treatment of materials
- 13. Ferrous alloys
- 14. Nonferrous alloys
- 15. Electrical properties of metals and semiconductors, including corrosions
- 16. Magnetism in materials and space
- 17. Composite materials
- 18. Preservation, deterioration, and failure of materials

Lab work includes:

- 1. Control charts and measurement accuracy
- 2. Crystal model building
- 3. Strain gauge measurement of modulus of elasticity
- 4. Determination of lattice constant by electron diffraction
- 5. Precipitation hardening
- 6. Hardening, tempering, and annealing of steel
- 7. Galvanic corrosion of steel
- 8. Cold working and annealing of brass
- 9. Casting of thermoset polymers
- 10. Thermal shock in glass and ceramics
- 11. Stress in tempered and annealed glass
- 12. Introduction to finite element analysis

Assignment:

- 1. Read textbook, one chapter per week (approximately 40 pages)
- 2. Homework problem sets (10 16)
- 3. Laboratory experiments (8 16), including lab reports
- 4. Presentation(s) (0 2)
- 5. Quiz(zes) in lab or lecture (0 15)
- 6. Exams (3 5)
- 7. Final exam

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Lab experiments, reports, and quiz(zes)

Writing 15 - 25%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problem sets and lecture quiz(zes)

Problem solving 10 - 20%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Presentation(s)

Skill Demonstrations 0 - 10%

Exams: All forms of formal testing, other than skill performance exams.

Exams and Final

Exams 50 - 75%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category 0 - 0%

Representative Textbooks and Materials:

Materials Science and Engineering: An Introduction. 10th ed. Callister, William. Wiley. 2018 Instructor-prepared materials
