PHYSIO 58 Course Outline as of Fall 2015

CATALOG INFORMATION

Dept and Nbr: PHYSIO 58 Title: INTRO HUMAN PHYSIO Full Title: Introduction to Human Physiology Last Reviewed: 1/27/2020

Units		Course Hours per Week		Nbr of Weeks	Course Hours Total	
Maximum	3.00	Lecture Scheduled	2.00	17.5	Lecture Scheduled	35.00
Minimum	3.00	Lab Scheduled	3.00	6	Lab Scheduled	52.50
		Contact DHR	0		Contact DHR	0
		Contact Total	5.00		Contact Total	87.50
		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 70.00

Total Student Learning Hours: 157.50

Title 5 Category:	AA Degree Applicable
Grading:	Grade or P/NP
Repeatability:	00 - Two Repeats if Grade was D, F, NC, or NP
Also Listed As:	
Formerly:	

Catalog Description:

This is an introductory course in human physiology, organized around body systems and the theme of homeostasis. The course is designed for the beginning student preparing for these health-related fields: vocational nursing, radiologic technology; or those with a general interest in the function of the human body. This course will minimize bio-chemical and quantitative details taught in a general physiology course (e.g., PHYSIO 1), focusing on the fundamental concepts of physiology. (Not intended for nursing (RN), dental hygiene, or physical therapy majors.)

Prerequisites/Corequisites:

Recommended Preparation:

Eligibility for ENGL 1A or equivalent and Course Completion of CHEM 60

Limits on Enrollment:

Schedule of Classes Information:

COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

1. Describe the functions of the organ systems of the body and how each organ system contributes to control of homeostasis.

2. Describe the physiological basis for a number of major diseases and disorders of the human body.

Objectives:

Upon completion of this course, students will be able to:

- 1. Define homeostasis and explain how feedback mechanisms function to maintain homeostasis.
- 2. Describe the function of the organ systems of the body, including the nervous, endocrine,

muscular, circulatory, respiratory, digestive, urinary, immune, reproductive systems.

- 3. Identify the roles of the nervous and endocrine systems in regulation of other organ systems.
- 4. Compare and contrast the basic mechanisms by which organ systems of the body maintain homeostasis.
- 5. Explain how the structure and function of cells support the function of organ systems.
- 6. Conduct simple physiological experiments using standard laboratory equipment.

Topics and Scope:

1. Introductory concepts

- a. scientific method
- b. levels of biological organization
- c. homeostasis
- 2. Cell structure and function
 - a. macromolecules
 - b. organelles
 - c. cell membranes
 - d. ATP (adenosine triphosphate) and enzymes
- 3. Control systems: nervous and endocrine
 - a. neurons, membrane potentials, synapses
 - b. structure and function of CNS (central nervous system), PNS (peripheral nervous system), ANS (autonomic nervous system)
 - c. sensory receptors, transduction
 - d. endocrine glands, hormones
- 4. Muscle system
 - a. skeletal, cardiac, smooth muscle
 - b. muscle contraction
- 5. Circulatory system
 - a. basic plan of circulation
 - b. cardiac cycle
 - c. blood vessels and blood pressure
 - d. regulation of cardiac output, blood pressure
 - e. basis for heart attack, hypertension, atherosclerosis
- 6. Respiratory system
 - a. ventilation
 - b. gas exchange
 - c. regulation of respiratory rate
 - d. description of chronic obstructive pulmonary disease
- 7. Urinary system
 - a. formation of urine
 - b. regulation of salt and water balance
 - c. regulation of acid base balance
- 8. Digestive system
 - a. organs and enzymes of digestion
 - b. factors that affect absorption
- 9. Immune system
 - a. injury and infection
 - b. organs, cells and molecules that provide immune defense
- 10. Reproductive system
 - a. organs and hormones involved in sperm production
 - b. organs and hormones of menstrual cycle, pregnancy, parturition, lactation
- 11. Laboratory exercises
 - a. homeostasis
 - b. osmosis
 - c. enzyme activity
 - d. reflex arc
 - f. senses
 - g. muscle contraction
 - h. cardiac function
 - i. pulmonary function
 - j. renal function
 - k. acid base balance

1. glucose tolerance test

Assignment:

- 1. Read 25-40 pages of text per week
- 2. Perform weekly laboratory experiments with data collection
- 3. Written laboratory reports, 12-16
- 4. Examinations: Four combined lecture and lab exams, a cumulative final exam
- 5. Written assignments, 2-5

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Lab reports and written assignments

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

None

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, true/false, matching items, completion, essay

Other: Includes any assessment tools that do not logically fit into the above categories.

Class participation

Representative Textbooks and Materials:

Essentials of Human Anatomy & Physiology, 11th edition, Elaine Marieb, 2014, Pearson Mader's Understanding Human Anatomy & Physiology, 8th edition, Susannah Longenbaker, 2013, McGraw-Hill Instructor prepared laboratory text

Problem solving
