COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

- 1. State and apply basic definitions, properties and theorems of multivariable calculus.
- 2. Compute and apply derivatives and multiple integrals of functions of two or more variables.
- 3. Compute and apply vector fields, line integrals, and surface integrals.
- 4. Use technology to analyze multivariable functions.

Objectives:

Upon completion of the course, students will be able to:

- 1. Interpret graphs in cylindrical and spherical coordinate systems.
- 2. Determine a limit of a multivariate function at a point.
- 3. Determine whether or not a multivariate function is continuous at a point.
- 4. Determine the differentiability of a multivariate function at a point.
- 5. Compute partial derivatives including higher order derivatives, directional derivatives and gradients,

tangent planes, extrema and saddle points of functions of two variables.

- 6. Find extrema of constrained multivariate functions using the method of Lagrange multipliers.
- 7. Apply chain rules to multivariable and vector functions.
- 8. Compute and apply area in the plane, double integrals and volume, center of mass, and moments of inertia.
- 9. Compute and apply surface area, triple integrals and volume, double integrals in rectangular and polar coordinate systems, and triple integrals in rectangular, cylindrical, and spherical coordinate systems.
- 10. Apply change of variables to evaluate integrals.
- 11. Apply vector fields, line integrals, independence of path, surface integrals, and the theorems of Green, Gauss, & Stokes.

- 12. Use a computer algebra system to evaluate partial derivatives and multiple integrals in various coordinate systems, including rectangular, cylindrical and spherical.
- 13. Use a computer algebra system to solve problems involving optimization, moments, area, and

volume.

- 14. Use computer graphing technology to visualize three dimensional curves, surfaces and vector fields.
- 15. Identify career objectives related to mathematics.

Topics and Scope:

- I. Functions of Several Variables
 - A. Introduction to cylindrical and spherical coordinates
 - B. Existence of limits and determination of continuity
 - C. Existence of derivatives
 - D. Surfaces in space
 - E. Partial derivatives
 - F. Chain rules
 - G. Directional derivatives and gradients
 - H. Tangent planes
 - I. Extrema of functions of two variables
 - J. Lagrange multiplier method
- II. Multiple Integration
 - A. Area in the plane
 - B. Double integrals and volume
 - C. Center of mass and moments of inertia
 - D. Surface area
 - E. Triple integrals and volume
 - F. Triple integrals in cylindrical and spherical coordinate systems
 - G. Change of variables
- III. Vector Analysis
 - A. Vector fields
 - B. Line integrals
 - C. Independence of path
 - D. Surface integrals
 - E. Theorems of Green, Gauss & Stokes
- IV. Technology
 - A. Computer algebra systems
 - 1. Partial derivatives and multiple integrals
 - 2. Volume and area
 - B. Visualization of three dimensional graphs
 - 1. Rectangular, cylindrical, spherical coordinate systems
 - 2. Curves, surfaces, contour maps
 - 3. Vector fields

Assignment:

- 1. Daily reading outside of class (20-50 pages per week).
- 2. Problem set assignments from required text(s) or supplementary materials chosen by the instructor (1-6 per week).
- 3. Quizzes (0-4 per week).
- 4. Exams (3-8 per term).

5. Projects (for example, computer explorations or modeling activities, 0-10 per term).

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments are more appropriate for this course.

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Problem set assignments

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice and free response exams; quizzes

Other: Includes any assessment tools that do not logically fit into the above categories.

Projects

Representative Textbooks and Materials:

Calculus: Early Transcendentals (7th). Stewart, James. Thomson Brooks/Cole: 2012. Thomas' Calculus, Early Transcendentals (12th). Thomas, Weir, and Haas Addison Wesley, 2009.

Writing

0 - 0%

Problem solving 5 - 20%

Skill Demonstrations 0 - 0%
