Total Student Learning Hours: 332.50

Title 5 Category: AA Degree Applicable

Grading: Grade Only

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly:

Catalog Description:
An in depth study of automotive drive train systems for the entry level auto student. Course covers theory, operation, diagnosis, service and overhaul of most automotive automatic and manual transmissions and trans axles, drive axles and all wheel drive systems. Diagnosis of modern drive train systems is emphasized. Instruction includes lecture and practical lab experience. Course prepares student for A2 and A3 ASE exams.

Prerequisites/Corequisites:

Recommended Preparation:
Course Eligibility for ENGL 100 and Course Completion of AUTO 100 OR Course Eligibility for EMLS 100 (or ESL 100)

Limits on Enrollment:

Schedule of Classes Information:
Description: Course covers theory, operation, diagnosis, service and overhaul of most automotive automatic and manual transmissions and transaxles, drive axles and all wheel drive systems. (Grade Only)

Prerequisites/Corequisites:

Recommended: Course Eligibility for ENGL 100 and Course Completion of AUTO 100 OR
Course Eligibility for EMLS 100 (or ESL 100)

Limits on Enrollment:

Transfer Credit: CSU;

Repeatability: Two Repeats if Grade was D, F, NC, or NP

Certificate Applicable Course

COURSE CONTENT

Outcomes and Objectives:

Upon successful completion of this course the student will be able to:

1. Explain the theory and operation of automotive drive train components.
2. Inspect, evaluate and repair automotive drive train components.
3. Analyze engine performance, transmission gearing and final drive ratios for specific vehicle applications.
4. Evaluate, diagnose and repair hydraulic system failures.
5. Evaluate, diagnose and repair electronic transmission controls.
6. Diagnose a malfunction in the gear train based on transmission power flow.
7. Take the ASE A2 and A3 certification exams.

Topics and Scope:

1. Safety/Introduction
 - a. FWD/RWD/AWD (four-wheel drive, rear-wheel drive, all-wheel drive)
 - b. Engine torque output interpretation
 - c. Gear ratio formulas - torque and speed calculation
 - d. Types of gears - effect on transmission construction
 - e. Types of bearings - load transfer
 - f. Radial and Thrust Loads
 - g. Causes of bearing failure
2. Clutches
 - a. Components
 - b. Clutch function - theory of operation - torque transfer variables
 - c. Linkages

- d. Diagnosis of clutch failure
- e. Clutch Service
- 3. Transmissions and transaxles
 - a. Power flow - transmissions - analysis of drive ratios
 - b. Power flow - transaxles - evaluation of drive ratios
 - c. Synchronizer function
 - d. Transmission diagnosis - analysis of transmission failure
 - e. Noise diagnosis
 - f. Evolution of transmissions - evolution of transmission design
- 4. Front and rear drivelines
 - a. Drive shaft construction
 - b. U-joint (universal joint) speed changes - analysis of variable velocity units
 - c. Angles-phasing of U-joints - operating angle measurements and limits
 - d. U-joint inspection and service
 - e. Axle shaft construction
 - f. Types of CV (constant velocity) joints
 - g. Axle inspection - failure analysis
 - h. Axle replacement procedure
- 5. Final drive assemblies
 - a. Types of final drives
 - b. Characteristics of high ratios - effect on vehicle performance and economy
 - c. Characteristics of low ratios - effect on vehicle performance and economy
 - d. Determining final drive ratios
 - e. Hypoid gear types: hunting and non-hunting
 - f. Hypoid gear setup procedure and evaluation
 - g. Differential operation
 - h. Traction control operating characteristics
 - i. Axle types and retention
- 6. All wheel drive (AWD) systems - traction variables
 - a. AWD terms
 - b. Full time AWD operating systems
 - c. Part time AWD operating systems
 - d. Transfer case types
 - e. Transfer case operation and torque transfer to drive axles
 - f. Transfer case service - failure analysis
 - g. Types of front hubs and axles
 - h. Front hub service
- 7. Introduction to automatics
 - a. Advantages of automatics
 - b. Theory of and operation
 - c. Classifying automatics
 - d. Hydraulic shift timing controls
 - e. Electronic shift timing controls
 - f. Common models
- 8. Planetary gear sets
 - a. Simple planetary gear set components and operating theory
 - b. Inputs, outputs and held members
 - c. Gear ratio calculation - torque speed changes
 - d. Ratios used in automotive applications

- e. Compound planetary gearset theory of operation
- 9. Hydraulics
 - a. Basic hydraulic operating theory
 - b. Force and pressure definitions
 - c. Pascal's law
 - d. Pressure and force calculations
 - e. Types and operation of pumps
 - f. Pressure regulation - evaluation of regular circuits
 - g. Spool valve parts and operation
 - h. Throttle and modulator valves
 - i. Governor operation
 - j. Engine load and road speed evaluation
- 10. Torque converters
 - a. Engine torque curves
 - b. Parts of converter
 - c. Rotary, vortex flow - analysis of hydraulic torque transfer
 - d. Stator operation
 - e. Stall speeds
 - f. Engine and converter matching - analysis of engine torque and converter interaction
 - g. Lock-up converters
 - h. Lock-up function
 - i. Lock-up conditions
- 11. Apply devices
 - a. Types of apply devices - torque transfer variables
 - b. Clutch pack overhaul
 - c. Clutch pack clearance - evaluation and correction
 - d. Band and servo overhaul
 - e. Band adjustments and inspection
 - f. Types of one-way clutches
 - g. Operation of one-way clutches
- 12. Fluids - power flow
 - a. Types of fluid - characteristics of fluid
 - b. Low fluid level problems
 - c. High fluid level problems
 - d. Transmission service procedures
 - e. Trans fluid temperature and service life - oil analysis
 - f. Oil cooler types - theory of heat transfer
 - g. Oil cooler circuits
 - h. End play controls - evaluation and correction
 - i. Selective thrusts
 - j. Bushings: inspection and replacement
 - k. Seal ring replacement - analysis of seal integrity
 - l. Piston seal replacement
 - m. Transmission power flow
- 13. Electronics
 - a. Basic computer operation
 - b. Input sensors and testing
 - c. Actuator function and testing
 - d. Computer diagnosis
 - e. Code retrieval
 - f. OBD II (On Board Diagnostics) code definitions

g. Default gear diagnosis

Assignment:

1. Reading assignment: 20-30 pages weekly.
2. Weekly objective quizzes covering inspection, evaluation and repair of drive train components.
3. Homework problems: worksheets.
4. Disassemble, inspect and reassemble listed components (skill demonstrations and performance exam).
5. Complete lab worksheets for lab evaluation.
6. Midterm.
7. Final exam.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments and skill demonstrations are more appropriate for this course.

Writing
0 - 0%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problems, Lab worksheets.

Problem solving
5 - 20%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Performance exams, Disassembly, inspection, reassembly.

Skill Demonstrations
35 - 60%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion

Exams
35 - 60%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category
0 - 0%
