		Non-contact DHR	0		Non-contact DHR	0

Total Out of Class Hours: 175.00 Total Student Learning Hours: 262.50

Title 5 Category: AA Degree Applicable

Grading: Grade Only

Repeatability: 00 - Two Repeats if Grade was D, F, NC, or NP

Also Listed As:

Formerly:

Catalog Description:

Topics include methods of integration, conic sections, polar coordinates, infinite sequences and series, parametric equations, solid analytic geometry, and vectors.

Prerequisites/Corequisites:

MATH 1A.

Recommended Preparation:

COURSE CONTENT

Outcomes and Objectives:

Upon completion of the course, students will be able to:

- 1. Apply methods of integration, including integration by parts and partial fractions, to calculate proper and improper integrals.
- 2. Define and discuss conic sections as equations, as geometric intersections and as loci.
- 3. Apply differentiation and integration to parametric representations of graphs, including polar graphs.
- 4. Use three dimensional rectangular coordinates.
- 5. Determine convergence of sequences and series.
- 6. Compute Taylor and Maclaurin series and demonstrate applications to elementary functions.
- 7. Compute and use determinants, dot products, cross products, and projections.
- 8. Determine lines and planes in space.
- 9. Describe velocity and acceleration of particles in the plane and in space using vector functions.

Topics and Scope:

- I. Integration
 - A. Integration by parts
 - B. Trigonometric integrals
 - C. Partial fractions
 - D. Improper integrals
 - E. Area of surfaces of revolution

- II. Topics From Plane Analytic Geometry
 - A. Conic sections
 - B. Polar coordinates and graphs
- III. Infinite Series
 - A. Sequences and series
 - B. Convergence tests
 - C. Taylor polynomials and approximations
 - D. Power series
 - E. Taylor and Maclaurin series
- IV. Parametric Equations
 - A. Tangents, arc length and areas
 - B. Tangents and area for polar graphs
- V. Topics from Solid Analytic Geometry
 - A. Rectangular coordinate system
 - B. Quadric surfaces
- VI. Vectors
 - A. Vectors in the plane and in space
 - B. Determinants
 - C. Dot and cross products
 - D. Projections
 - E. Lines and planes in space
 - F. Differentiation and integration of vector values functions
 - G. Velocity and acceleration
 - H. Tangent and normal vectors
 - I. Curvature

Assignment:

- 1. Daily reading outside of class (20-50 pages per week).
- 2. Problem set assignments from required text(s) or supplementary materials chosen by the instructor (1-6 per week).
- 3. Quizzes (0-4 per week).
- 4. Exams (3-8 per term).
- 5. Projects (for example, computer explorations or modeling activities, 0-10 per term.)

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments are more appropriate for this course.

Writing 0 - 0%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problems

Problem solving 5 - 20%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations 0 - 0%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice and free response exams; quizzes

Exams 70 - 95%

Other: Includes any assessment tools that do not logically fit into the above categories.

Projects

Other Category 0 - 10%

Representative Textbooks and Materials:

Calculus: Early Transcendentals (6th). Stewart, James. Thomson

Brooks/Cole: 2008.
