Catalog Description:
This geographic information systems (GIS) course provides students with the knowledge and practical experience necessary to develop skills in the acquisition, conversion, integration, analysis, management, storage and drafting of geospatial and attribute data.

Prerequisites/Corequisites:
Course Completion of GIS 51 OR Course Completion of APTECH 54B (or CEST399.54)

Recommended Preparation:

Limits on Enrollment:

Both Certificate and Major Applicable

COURSE CONTENT

Outcomes and Objectives:

Upon completion of this course, the student will be able to:

1. Identify appropriate sources of geospatial data for GIS
2. Identify appropriate sources of attribute data for GIS
3. Collect data in the field using GPS technology
4. Capture attribute data from public and proprietary sources
5. Hand digitize data from aerial and remote sensing imagery or maps
6. Integrate Computer Aided Drafting (CAD), Raster, Triangular Irregular Network (TIN), Vector and point data in a GIS project
7. Differentiate and prioritize GIS data based on source precision and source accuracy
8. Prepare written, formatted and diagrammatic summaries of various data sources
9. Describe data in narrative fashion for scientific reports and transmission to clients
10. Repeating students will gain enhanced skills and proficiencies through learning and applying methodologies and tools from updated and upgraded versions of the software.

Topics and Scope:

1. Data science and the theory of data
2. Data as discrete numbers vs. data as information
3. Arithmetic and logic
4. Data types, formats and field collection methods
5. Acquisition of existing geospatial and attribute data sets from related GIS sources
6. Acquisition of geospatial and attribute data from remote sensing
7. Analysis, summarization and handling of raw data
8. Conversions and management of data and data files
9. Metadata and data documentation
10. Global positioning systems (GPS)
11. Coordinate systems and datums

12. Mobile mapping and composing field notes
13. Summarize and deliver GIS data
14. With repeat: Updated versions of software - methodologies and tools.

Assignment:

1. Reading assignments averaging 30-50 pages per week. The reading will be assigned each week for the material to be covered in class the following week.
2. Weekly or biweekly lab reports
3. Midterm exam
4. Final exam
5. Repeating students will gain enhanced skills and proficiencies through learning and applying methodologies and tools from updated and upgraded versions of the software.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments are more appropriate for this course.

Writing
0 - 0%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Lab reports

Problem solving
40 - 50%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Operate GPS receivers, proper acquisition of data

Skill Demonstrations
30 - 40%

Exams: All forms of formal testing, other than skill performance exams.

Mid-term exam and final exam, including: multiple choice, completion, true-false, short answer, short essay, and/or oral presentation

Exams
20 - 30%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category
0 - 0%
