COURSE CONTENT

Student Learning Outcomes:

Upon completion of the course, students will be able to:

1. Operate and maintain AC and DC motors and controllers.
2. Operate and maintain AC and DC generators.
3. Install and maintain motor controllers.
4. Implement safety and tag-out procedures.

Objectives:

Upon completion of the course the student will be able to:

1. Analyze the operating principles of AC and DC motors.
2. Apply proper safety procedures for working around motors and rotating machinery.
3. Apply proper tag-out procedures when working on electrical equipment.
4. Diagnose and repair AC and DC motor starters and controllers.
5. Diagnose and repair AC and DC generator controllers.
6. Evaluate and repair defective rectifiers in alternators.
7. Interpret name plate information found on motors and generators.
8. Test for the correct installation of rotating machinery, including proper alignment and belt tensions.
9. Design predictive and ordinary maintenance routines using common rotating machinery test equipment.

Topics and Scope:

- I. Safety in the Workplace
- II. Magnetism & Electromagnetism
- III. Single- and Three-Phase AC Generators (Alternators)
 - A. slip rings and brushes
 - B. rotating armature, stationary fields
 - C. rotating fields, stationary armature

- D. self-excitation
 - E. external excitation
 - F. rectifiers
- IV. Basic Motor Operating Principles
- A. attraction-repulsion
 - B. effect of generating current to line current
 - C. starting current
 - D. running current
 - E. effect of load on the motor
- V. DC Motors
- A. series motors
 - B. shunt motors
 - C. compound motors
- VI. Series-Wound AC Motors
- A. characteristics
 - B. compare to DC series motors
- VII. AC Induction Motors
- A. rotating magnetic fields
 - B. single-phase rotating fields
 - C. three-phase rotating fields
 - D. eddy currents
 - E. stators
 - F. rotors
 - G. squirrel cage rotors
- VIII. Stepper Motors
- IX. Servo Motors
- X. Motor Controllers - AC and DC Tachometers
- XI. Predictive Maintenance Procedures
- A. vibration analysis
 - B. EMI evaluations and analysis of rotating machinery
 - C. megohmmeters and their uses
 - D. belt slippage and adjustments
 - E. alignment and installation procedures of rotating machinery
- XII. Rotating machinery name plate information and usage in maintenance and installation
- XIII. Motor Safety and 440 V three Phase Circuits
- XIV. Very large motor precautions (10 Hp and greater)
- XV. Laboratory Exercises
- A. lab safety procedures
 - B. using test equipment for analysis
 - C. magnetic and electromagnetic properties
 - D. DC motors
 - E. generators
 - F. AC motors
 - G. motor controllers
 - H. maintenance procedures

Assignment:

1. weekly reading assignments (10-20 pages)
2. lab assignments (5-10)
3. homework assignments (10-15) including writing a maintenance or safety procedure
4. quizzes (2-5)

5. midterm exam and final exam

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Maintenance or safety procedure

Writing
10 - 30%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problems

Problem solving
20 - 50%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

Lab Assignments

Skill Demonstrations
10 - 30%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, True/false, Matching items, Completion

Exams
20 - 50%

Other: Includes any assessment tools that do not logically fit into the above categories.

None

Other Category
0 - 0%
