COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

- 1. Use major psychological theoretical perspectives to explain human behavior.
- 2. Identify the major scientific research methods, and use the critical thinking process to assess research materials and methods.

Objectives:

Upon completion of this course, students will able to:

- 1. Define psychology; outline its historical roots; identify what psychologists do; and apply the critical thinking process to psychological phenomena and research outcomes.
- 2. Describe and apply with examples the various psychological research methods used to study behavior; include description of case studies, naturalistic and laboratory observations, correlational studies, surveys and tests, the experimental method, and longitudinal and crosssectional studies.
- 3. Diagram the structure of the brain and its neuron cells; include descriptions of hemispheric specialization, location of important structures and their functions, and male/female differences.
- 4. Discriminate among the following body rhythms and mental states: circadian rhythm and the sleep cycle, infradian rhythm and the premenstrual cycle, and ultradian rhythm and the stages of dream.

- 5. Analyze the processes of sensation and perception and relate how abilities, beliefs, and emotions can affect sensory perception.
- 6. Summarize the principles of classical conditioning, operant conditioning, and social-cognitive learning and apply these principles when explaining the origins of phobias, fetishes, and aggression.
- 7. Determine how societal roles and rules, authority figures, and group opinions and behaviors affect an individual's opinions, actions, and emotions; generate a plan on how to decrease stereotypes, prejudice, and discrimination.
- 8. Distinguish among the different theories of intelligence, including Sternberg's Triarchic Theory of Intelligence and Gardner's Theory of Multiple Intelligence.
- 9. Discuss how the body, the mind, and culture influence the experience and display of emotions; assess the components of stress and describe how to cope and manage stressful events.
- 10. Compare and contrast the following theories of personalities: biological (genes and heredity), environmental (parents, peers, situations), cultural (values and traits), psychodynamic (unconscious conflicts and desires), and humanistic (present inner self).
- 11. Analyze and describe the following categories of psychological disorder: anxiety disorders, mood disorders, eating disorders, personality disorders, dissociative disorders and schizophrenia.
- 12. Apply the following treatment strategies and therapeutic styles to their appropriate psychological disorders: lobotomy, ECT, antianxiety, antidepressant, antipsychotic, psychodynamic, cognitive-behavioral, behavioral, humanistic, group, and family.

Topics and Scope:

- 1. Introduction to Psychological Theories
- 2. Psychology Research Methods
- 3. Evolution, Genes, and Behavior
- 4. Neurons, Hormones, and the Brain
- 5. Body Rhythms and Mental States
- 6. Sensation and Perception
- 7. Learning and Conditioning
- 8. Behavior in Social and Cultural Context
- 9. Thinking and Intelligence
- 10. Memory
- 11. Emotion
- 12. Motivation
- 13. Theories of Personality
- 14. Development over the Life Span
- 15. Health, Stress, and Coping
- 16. Psychological Disorders

Assignment:

- 1. Carefully read, approximately 25-35 pages per week, and recapitulate assigned materials in the textbook and supplements.
- 2. Take two midterm exams and one final on lectures, reading concepts and terminology.
- 3. Write approximately 1000 to 1500 word essay(s), or term/research papers for the purpose of learning research skills, enhancing course knowledge, and improving critical thinking and writing skills.
- 4. Oral presentations and group projects may be assigned.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Research paper

Writing 10 - 25%

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

None

Problem solving 0 - 0%

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations 0 - 0%

Exams: All forms of formal testing, other than skill performance exams.

Multiple choice, true/false, essay exams, fill-in, short answer

Exams 75 - 90%

Other: Includes any assessment tools that do not logically fit into the above categories.

Oral presentations, group projects

Other Category 0 - 10%
