Catalog Description:

This course surveys various psychological research methods with an emphasis on research design, experimental procedures, descriptive methods, instrumentation, and the collection, analysis, interpretation, and reporting of research data. Research design and methodology will be examined through a review of research in a variety of the subdisciplines of psychology and applications in classroom experiments, surveys, and systematic and naturalistic observations.

Prerequisites/Corequisites:

Course Completion of PSYCH 1A; AND Course Completion of MATH 15 OR PSYCH 9

Recommended Preparation:

Eligibility for ENGL 1A or equivalent

Limits on Enrollment:

COURSE CONTENT

Student Learning Outcomes:

At the conclusion of this course, the student should be able to:

- 1. Critically read psychological research and identify basic methodologies such as experiment, observation, and survey.
- 2. Develop a clear research question and hypothesis, implement an appropriate methodology following ethical standards and analyze data using descriptive statistics.
- 3. Write a research paper using American Psychological Association format and standard statistical software for analysis.

Objectives:

At the conclusion of this course, the student should be able to:

- 1. Explain the basic principles of the scientific method.
- 2. Critically evaluate research reports.
- 3. Synthesize a body of research findings.
- 4. Develop and test hypotheses.
- 5. Demonstrate knowledge of general research designs, experimental and non-experimental methods, and standard research practices.
- 6. Select appropriate research designs to test hypotheses.
- 7. Explain the ethical treatment of human and animal participants in research and the institutional requirements for conducting research.
- 8. Assess the generalizability of study results.
- 9. Demonstrate proficiency in APA style.

Topics and Scope:

- 1. Introduction to Psychological Research
- 2. Explanation in Scientific Psychology
- 3. Exploring Psychological Research Literature
- 4. Observation and Survey in Psychological Research
- 5. Qualitative and Quantitative Research
- 6. Statistical Tests Application
- 7. Correlation/Relational Research
- 8. Basics of Experimentation
- 9. Validity and Reliability in Research
- 10. Experimental Design Methodology
- 11. Complex Design Methodology
- 12. Small-n Experimentation Methodology
- 13. Quasi-Experimentation Methodology
- 14. Conducting Ethical Research
- 15. Interpreting the Results of Research
- 16. Presenting Research Results
- 17. Writing an APA Research Paper

Assignment:

- 1. Read approximately 25-35 pages per week, and recapitulate assigned material in the textbook, and if applicable, supplements
- 2. One to three exams and/or projects and one final examination or project
- 3. One to three writing assignments including a research paper for a minimum of 1250 words
- 4. Oral presentations and/or group projects

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

Written homework, term, or research paper. A minimum of 1,250 words for the course.

Problem Solving: Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework and in-class assignments

Skill Demonstrations: All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Exams: All forms of formal testing, other than skill performance exams.

Writing	
25 - 35%	

Problem solving
10 - 20%

Multiple choice, true/false, fill-in, essay, and short answers

Other: Includes any assessment tools that do not logically fit into the above categories.

Exams 25 - 35%

Other Category 10 - 20%

Oral presentation, group projects
