**Catalog Description:**

This course is an intermediate algebra course which incorporates the use of technology. The topics in this course include functions, equations and inequalities in one variable, systems of linear equations in two or three variables, exponential and logarithmic functions and equations, and discrete topics. Graphing calculators and/or computer algebra systems will be incorporated into the above, as appropriate.

**Prerequisites/Corequisites:**

Completion of MATH 150B or higher (V1) OR Course Completion of MATH 151

**Recommended Preparation:****Limits on Enrollment:****Schedule of Classes Information:**

### **COURSE CONTENT**

**Outcomes and Objectives:**

Upon successful completion of the course, students will be able to:

1. Define function, domain and range and use function notation appropriately.
2. Identify basic features of the graphs of polynomial, radical, absolute value, rational, exponential and logarithmic functions.
3. Use a graphing calculator to construct graphs, locate roots, intersection points, maximum and minimum values.
4. Find algebraic and graphical solutions to equations that involve polynomial, radical, absolute value, rational, exponential and logarithmic functions.
5. Find graphical solutions to nonlinear inequalities in one variable.
6. Find algebraic solutions to literal equations.
7. Solve, either graphically or algebraically, application and modeling problems that use polynomial, radical, absolute value, rational, exponential and logarithmic functions.
8. Solve linear systems in two and three variables with algebraic methods.
9. Express a system of linear equations as an augmented matrix, transform the matrix with a graphing calculator to its Reduced Row Echelon Form, and interpret the solution set of the system from the RREF.
10. Solve application and modeling problems that require the use of a system of linear equations.

11. Find a graphical solution to a system of linear inequalities.
12. Use the basic properties of exponents and the common and natural logarithms to simplify expressions and solve equations.
13. Express an understanding of the number  $e$ .
14. Evaluate sequence and series expressions, by hand and with a calculator.
15. Use factorial notation and find binomial coefficients by hand and with a calculator.

### **Topics and Scope:**

Instructional methodology may include, but is not limited to: lecture, demonstrations, oral recitation, discussion, supervised practice, independent study, outside project or other assignments.

- I. Use of Technology
  - A. Demonstrate algebraic concepts
  - B. Observe and predict behavior of functions
  - C. Process information
  - D. Manipulate structures such as matrices
  - E. Perform summations
- II. Functions and Equations
  - A. Definitions
    1. Function
    2. Function notation
    3. Evaluation
    4. Domain
    5. Range
  - B. Graphs of functions
    1. Polynomial
    2. Radical
    3. Absolute value
  - C. Graphical and algebraic solutions to equations and inequalities
    1. Polynomial
    2. Radical
    3. Absolute value
  - D. Solution of literal equations
  - E. Applications to emphasize mathematical models that use polynomial, rational, and radical functions
- III. Systems of Equations/Inequalities
  - A. Solution of linear systems
  - B. Matrices and RREF
  - C. Systems of linear inequalities
  - D. Applications and modeling
- IV. Exponential and Logarithmic Functions and Equations
  - A. Common and natural logarithms
  - B. Graphs
  - C. The number  $e$
  - D. Laws of logarithms
  - E. Solving exponential and logarithmic equations
  - F. Applications and modeling
- V. Discrete Topics
  - A. Introduction to sequences and series

- B. Summation notation
- C. Factorial notation
- D. Pascal's triangle
- E. Binomial coefficients
- F. Binomial expansion
- G. Applications and modeling

**Assignment:**

1. Daily reading outside of class (approximately 0-50 pages per week).
2. Problem set assignments from required text(s) or supplementary materials chosen by the instructor.
3. Exams and quizzes.
4. Projects (for example, calculator explorations and activities).

**Methods of Evaluation/Basis of Grade:**

**Writing:** Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments are more appropriate for this course.

Writing  
0 - 0%

**Problem Solving:** Assessment tools, other than exams, that demonstrate competence in computational or non-computational problem solving skills.

Homework problems

Problem solving  
5 - 20%

**Skill Demonstrations:** All skill-based and physical demonstrations used for assessment purposes including skill performance exams.

None

Skill Demonstrations  
0 - 0%

**Exams:** All forms of formal testing, other than skill performance exams.

Multiple choice, Quizzes, free response exams

Exams  
70 - 95%

**Other:** Includes any assessment tools that do not logically fit into the above categories.

Projects

Other Category  
0 - 10%

**Representative Textbooks and Materials:**

Text(s) required of each student will be selected by the department, a committee of the department, or the responsible instructor from the books currently available. Choices in the past have included:

Intermediate Algebra: Concepts and Applications (7th ed.). Bittinger, Marvin; Keedy, Mervin; Ellenbogen, David. Addison-Wesley: 2006.  
Intermediate Algebra (4th ed.). Martin-Gay, Elayn. Prentice Hall, 2005.
