COURSE CONTENT

Outcomes and Objectives:

- 1. Students will gain skills in basic photographic techniques, including camera operation, the use of composition and lighting as applied to subject matter, and the processing of their own photographic imagery in a laboratory situation.
- 2. Also gained will be an understanding and appreciation of the photographic process, including basic theory behind the use of light sensitive materials and lenses to form an image.

Topics and Scope:

- 1. An overview of the history of photography.
- 2. The camera and its operation, including lenses, shutters, and exposure controls.
- 3. Film and exposure, including proper exposure techniques and film processing.
- 4. Printing and enlarging, both theory and practical darkroom application
- 5. The picture, including composition, perspective and the use of lighting.
- 6. Photographing people and closeups, including use of lighting for these situations.
- 7. Other photographic problems, including the use of filters, action, and special considerations of color photography.

Assignment:

A variety of assignments in black and white, which emphasize the use of pattern, texture, form, composition and design while photographing various

assigned subjects or situations.

Methods of Evaluation/Basis of Grade:

Writing: Assessment tools that demonstrate writing skills and/or require students to select, organize and explain ideas in writing.

None, This is a degree applicable course but assessment tools based on writing are not included because problem solving assessments and skill demonstrations are more appropriate for this course.
